Maryland Department of Health and Mental Hygiene

Parris N. Glendening, Governor
Martin P. Wasserman, M.D., J.D., Secretary

MARYLAND

Regions and Political Subdivisions

The services and facilities of the Maryland State Department of Health and Mental Hygiene (DHMH) are operated on a non-discriminatory basis. This policy prohibits discrimination on the basis of race, color, sex, or national origin and applies to the provisions of employment and granting of advantages, privileges and accommodations.

The Department, in compliance with the Americans With Disabilities Act, ensures that qualified individuals with disabilities are given an opportunity to participate in and benefit from DHMH services, programs, benefits and employment opportunities.

DEFINITIONS AND EXPLANATORY NOTES

The birth and death data contained in this report are presented on a county of residence basis, regardless of where the vital event occurred, unless specifically noted otherwise. Information on marriages and divorces is limited only to events occurring in Maryland.

DEFINITIONS

Age-adjustment: A methodology used to compare rates among populations with differing age distributions. The direct method of age-adjustment was used to calculate the rates in this report. In this way, the crude death rate for each age group is multiplied by the proportion of the standard population within that age group; the sum of the products is the age-adjusted rate. Age-adjusted rates in this report are standardized to the 1940 U.S. population and are expressed as rates per 100,000 population. Age-adjusted rates should not be compared to crude rates or to adjusted rates calculated using a different standard population.

Birth rate: Number of live births per 1,000 population.

Death rate: Number of deaths from all causes per 1,000 or per 100,000 population. Death rates for specific causes are per 100,000 population.

Fetal death*: Death before the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such separation, the fetus does not breathe or show any evidence of life, such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles.

Fetal mortality rate: Number of reportable fetal deaths per 1,000 total births. Total births include live births plus fetal deaths of twenty or more weeks gestation.

Infant death: Death occurring to a person under one year of age.

Infant mortality rate: Number of infant deaths per 1,000 live births.

Length of pregnancy: A measure of the duration of gestation in completed weeks, as calculated from the first day of the last normal menstrual period to the date of birth.

Live birth*: The complete expulsion extraction from its mother of a product of human conception, irrespective of the period of gestation, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscle, whether or not the umbilical cord has been cut or the placenta is attached.

Life expectancy: The average number of years of life remaining for an individual of a particular age group.

Low birth weight: A live birth weighing under 2,500 grams (5 1/2 pounds).

Maternal mortality rate: Number of maternal deaths per 100,000 live births.

Mortality rate: See death rate.

Neonatal death: Death occurring to a person under 28 days of age.

Neonatal mortality rate: Number of neonatal deaths per 1,000 live births.

Perinatal death: Death occurring after twenty weeks of gestation but before 28 days after birth. The perinatal deaths included in this report are, therefore, the sum of the reportable fetal deaths (fetal deaths after 20 weeks gestation) and the neonatal deaths.

Perinatal mortality rate: Number of perinatal deaths per 1,000 total births. Total births include live births plus fetal deaths of twenty weeks gestation or more.

Postneonatal death: Death occurring to a person between the 28 days and one year of age.

Postneonatal mortality rate: Number of postneonatal deaths per 1,000 live births.

EXPLANATORY NOTES

METHODOLOGY USED IN POPULATION ESTIMATES

The subdivision estimates for July 1, 1996 in this report were prepared by the U.S. Bureau of the Census, Federal-State Cooperative Program for Population Estimates, using the tax return method. This is a component method that uses federal tax data to measure the net intercounty migration of the household population under 65 years of age, reported resident birth and death statistics to estimate net natural change and data on Medicare enrollees to estimate the population 65 years old and over. Tax data are used in the base year and the estimate year to determine the number of persons whose county of residence changed during the period. A net migration rate based on exemptions claimed by the matched cases is applied to the household population under 65 years of age. These estimates of migration are then combined with the independent estimates of the population 65 years old and over, inmates of institutions, college students in dormitories, military personnel living in barracks, and the other components of population change (births, deaths, immigration from abroad, and net movement between the military and civilian population) to yield an overall estimate of the total population.

The population 5-17 years of age is estimated based on migration rates calculated from school enrollment data (by age, race and grade) supplied by the Maryland State Department of Education and applied to the "expected" population 5-17 years of age on July 1 of the estimate year. The

"expected" population consists of 1990 census survivors from the date of the census to the estimate date. Race breakdowns are based upon projections of change since the 1990 Census.

The population under five years of age is estimated by race on the basis of adjusted net migration rates for the school age population applied to the "expected" population under five years of age on July 1, 1996. The "expected" population consists of 1990 census survivors and survivors of births occurring between the date of the census and the estimate date (including corrections for "migration exposure").

The population 65 years of age and over is estimated based on data on Medicare enrollments by race and sex supplied by the Social Security Administration, U.S. Department of Health and Human Services. The changes in the Medicare enrollments for each age-race-sex group for the estimate year are applied to the population estimates of the previous year.

The ages 18-64 years residual population (obtained by subtracting the under 18 and over 65 year age groups from the county estimate) is broken down using projections for race and age. Gender is determined using ratios from the 1990 Census. All components are finally controlled to be consistent with the State age population as prepared by the Bureau of the Census.

Because portions of the population were prepared using different methodologies than those used in previous years, comparisons between 1996 and earlier years should be made with caution. The best comparisons are those between 1996 and the decennial census years.

CAUSE OF DEATH

The ninth revision of the International Classification of Diseases was first used in 1979 for coding the Underlying Cause of Death. The eighth revision had been in use from 1969 to 1978. Because of coding changes in certain categories of causes of death, comparison between current data and data earlier than 1979 should only be made with reference to coding changes. The National Center for Health Statistics has published comparability ratios for mortality data. This publication is entitled "Estimates of Selected Comparability Ratios Based on Dual Coding of 1976 Death Certificates by the Eighth and Ninth Revisions of the International Classification of Diseases" Monthly Vital Statistics Report, DHEW Publication No. (PHS)80-1120, Vol. 28, No. 11, February 1980.

*The definitions of live birth and fetal death are set by law in Section 14 (a) of Article 43 of the Maryland Code, 1957 Edition - Supplement. However, fetal deaths are reportable for filing purposes only if the death occurs after a period of gestation of twenty or more completed weeks (Section 21 (a) or Article 43 supra). Therefore, the fetal deaths included in this report cover only those of twenty or more weeks of gestation.

VITAL STATISTICS HIGHLIGHTS

Highlights of 1996

Population

- ! The estimated **population** of Maryland in 1996 was 5,071,600, an increase of 0.6% from the year before. The African American population increased by 2.7% between 1995 and 1996, while the size of the white population declined slightly.

Life expectancy

- ! The **life expectancy** for an infant born in 1996 was xxxx years. For whites this figure was xxxx years and for African Americans, xxxx years.

Births

- ! There were 71,473 **births** in 1996, 1.2% fewer than in 1995. The number of births fell by 3.1% among whites and rose by 1.6% among African Americans.
- ! The **birth rate** fell by 1.4% between 1995 and 1996 to a rate of 14.1 per 1,000 population. The rate declined by 3.1% among whites and by 1.2% among African Americans. Both the number of births and birth rates have been declining in Maryland since 1990.
- ! More than 10% of all births were to **teen mothers**, and 4.3% were to mothers under the age of 18.
- ! Thirteen percent of births were to women who had completed fewer than **12 years of education**.
- ! **Fourth and higher order births** accounted for 8.9% of all births.
- ! In terms of **area of occurrence**, 90% of all births to Maryland residents occurred within the state. Approximately 8% occurred in the District of Columbia and 2% in other states.

- ! Nearly 34% of all births were to **unmarried women**. For whites this figure was 19.6% and for African Americans, 63.1%.
- ! More than 88% of all women began **prenatal care** during the first trimester of pregnancy, while nearly 3% of births were to women who received late (third trimester) or no prenatal care.
- ! The incidence of **low birth weight** was 8.6% in 1996. This figure was 6.3% for white infants and 13.4% for African American infants. The incidence of **very low birth weight** was 1.9% overall, 1.1% for whites and 3.6% for African Americans. The percentages of low birth weight and very low birth weight infants have been increasing over the past decade.
- ! More than 10% of infants with known **gestational age** were delivered before the completion of 37 weeks of gestation. This figure was 8.4% for whites and 14.8% for African Americans.
- ! Three percent of all births were twin or higher order in 1996. The percentage of **multiple births** has increased by 41% in the past 10 years.
- ! The rate of **cesarean delivery** was 5% lower in 1996 (21.7%) than in 1995 (22.8%).

Fetal and infant deaths

- ! The **fetal death rate** in 1996 was 7.8 per 1,000 total deliveries. For whites this figure was 5.9 and for African Americans, 12.5.
- ! The **infant mortality rate** was 8.4 per 1000 live births in 1996, a decline of 3% from the 1995 rate of 8.7 per 1000 live births. The rate was 5.9 for whites and 14.5 for African Americans.
- ! The **neonatal mortality rate** was 5.8 per 1000 live births for all infants, 3% lower than the rate in 1995. The rate was 3.6 for whites and 10.7 for

African Americans.

- ! The **postneonatal mortality rate** was 2.6 per 1000 live births for all races, 2.2 for whites and 3.8 for African Americans.

Deaths

- ! There were 41,903 **deaths** among Maryland residents in 1996 compared with 41,681 in the year before.
- ! The **crude death rate** was 826.2 per 100,000 population in 1996, slightly lower than the 1995 rate of 826.6 per 100,000 population.
- ! **Age-specific death rates** declined for all age groups except those aged 65-74 years and 85 years and over, both of which showed only small increases. Death rates decreased substantially for individuals ages 1-4 years and those aged 35-44 years. REASONS
- ! The **age-adjusted mortality rate** was 519.1 per 100,000 population, a 2% decline from the 1995 rate of 529.6. Age-adjusted mortality rates declined for white males, African American males and African American females and increased slightly for white females.
- ! **Age-adjusted death rates** declined between 1995 and 1996, for six of the 15 leading causes of death. The largest decline was observed for the HIV death rate, which fell by 19%. Age-adjusted death rates increased for five of the leading causes of death and remained unchanged for three leading causes.
- ! In terms of **gender differentials** in mortality, males had an age-adjusted death rate that was 60% higher than the rate among females. Age-adjusted death rates were higher for men than women for all leading causes of death except Alzheimer's disease.
- ! In terms of **race differentials** in mortality, age adjusted death rates were 70% higher among Africans than among whites. Rates were higher among African Americans for all leading causes of death except chronic obstructive pulmonary diseases, suicide and Alzheimer's disease. The largest differentials were for homicide and HIV, for which the age-adjusted rates for African Americans were 11 times higher than the rate for the white population.
- ! The three **leading causes of death** for both males and females were diseases of the heart, malignant neoplasms and cerebrovascular disease. These were also the leading causes of death for the white population. Among African Americans, the leading causes of death were diseases of the heart, malignant neoplasms and HIV.
- ! **Heart disease** was the leading cause of death in 1996. The age-adjusted mortality rate was 131.1 per 100,000 population, 1% lower than the rate in 1995 and 30% lower than the rate a decade ago. The rate was highest among African American males, with a rate of 217.6 per 100,000 population in 1996.
- ! The second leading cause of death in 1996 was **malignant neoplasms**, responsible for 24% of all deaths. The overall age-adjusted mortality rate for malignant neoplasms was 136.1 per 100,000 population in 1996, 2% lower than the rate in 1995. The age-adjusted mortality rate was highest for African American males, with a rate of 227.5 per 100,000 population.
- ! **Cerebrovascular disease** was the third leading cause of death in 1996 with an age-adjusted mortality rate of 26.1 per 100,000 population. The rate declined by 3.3% between 1995 and 1996, reversing a trend of increasing rates observed since 1990.
- ! **Chronic obstructive pulmonary diseases** were the fourth leading cause of death in 1996. The age-adjusted mortality rate was 20.0 per 100,000 population, an increase of 7.5% from the year before.
- ! **Pneumonia and influenza** replaced accidents and adverse effects as the sixth leading cause of death in 1996. The age-adjusted mortality rate

- was 13.5 per 100,000 population, a 3% increase over the 1995 rate. Rates increased by 9% among white females and by 1% among African American females while declining slightly among males of both races.
- ! The sixth leading cause of death in 1996 was **diabetes**, with an age-adjusted mortality rate of 17.5 per 100,000 population, identical to the rate in 1995. This is the first year since 1990 that the diabetes death rate has not risen. There has been a 62% increase in the age-adjusted mortality rate for diabetes in the last decade.
 - ! **Accidents and adverse effects** were the seventh leading cause of death in 1996 with an age-adjusted mortality rate of 23.4 per 100,000 population. **Motor vehicle accidents** were responsible for nearly half of all accidental deaths. Age-adjusted death rates for motor vehicle accidents fell by 15% among white males but increased by 29% among African American males between 1995 and 1996. Falls accounted for the largest number of non-vehicular accidental deaths.
 - ! **Human immunodeficiency virus** remained the eighth leading cause of death in 1996. However, there was a 19% decline in the age-adjusted death rate for HIV between 1995 and 1996, the first decline observed since these data were first reported in 1988. Despite declines of 42% among white males and 21% among African American males, mortality rates increased by 10% among white females and by 2% among African American females. HIV was the leading cause of death among persons between the ages of 25 and 44.
 - ! The age-adjusted mortality rate for **septicemia**, the ninth leading cause of death, was 7.1 per 100,000 population in 1996, similar to the 1995 rate of 7.0. The septicemia death rate among African Americans, which has historically been substantially higher than the rate among whites, declined between 1995 and 1996.
- ! There were 604 **homicides** among Maryland residents in 1996. The age-adjusted death rate fell from 14.1 per 100,000 population in 1995 to 13.4 in 1996, a 5% decline. Rates fell among whites and African Americans. Despite declines in the homicide death rate in recent years, homicide remains the leading cause of death among Maryland residents ages 15-24 years and the third leading cause of death among children 5-14 years of age.
- ! There were 501 **suicides** among Maryland residents in 1996 for an overall age-adjusted mortality rate of 9.3 per 100,000 population. Suicides death rates increased substantially between 1995 and 1996 among white and African American women, while declining among men of both races. Suicide was the third leading cause of death among adolescents and young adults ages 15-24.
- ! There were 13 **maternal deaths** reported in 1996, compared with nine in 1995.
- ! In terms of **place of occurrence**, 93% of all deaths among Maryland residents occurred within the state. Approximately 4% of deaths to Maryland residents occurred in the District of Columbia and 3% occurred in other states.

Marriages

- ! There were 41,909 **marriages** in Maryland in 1996. Thirty-five percent of both brides and grooms were previously married. Seventy-one grooms and 422 brides were under the age of 18.

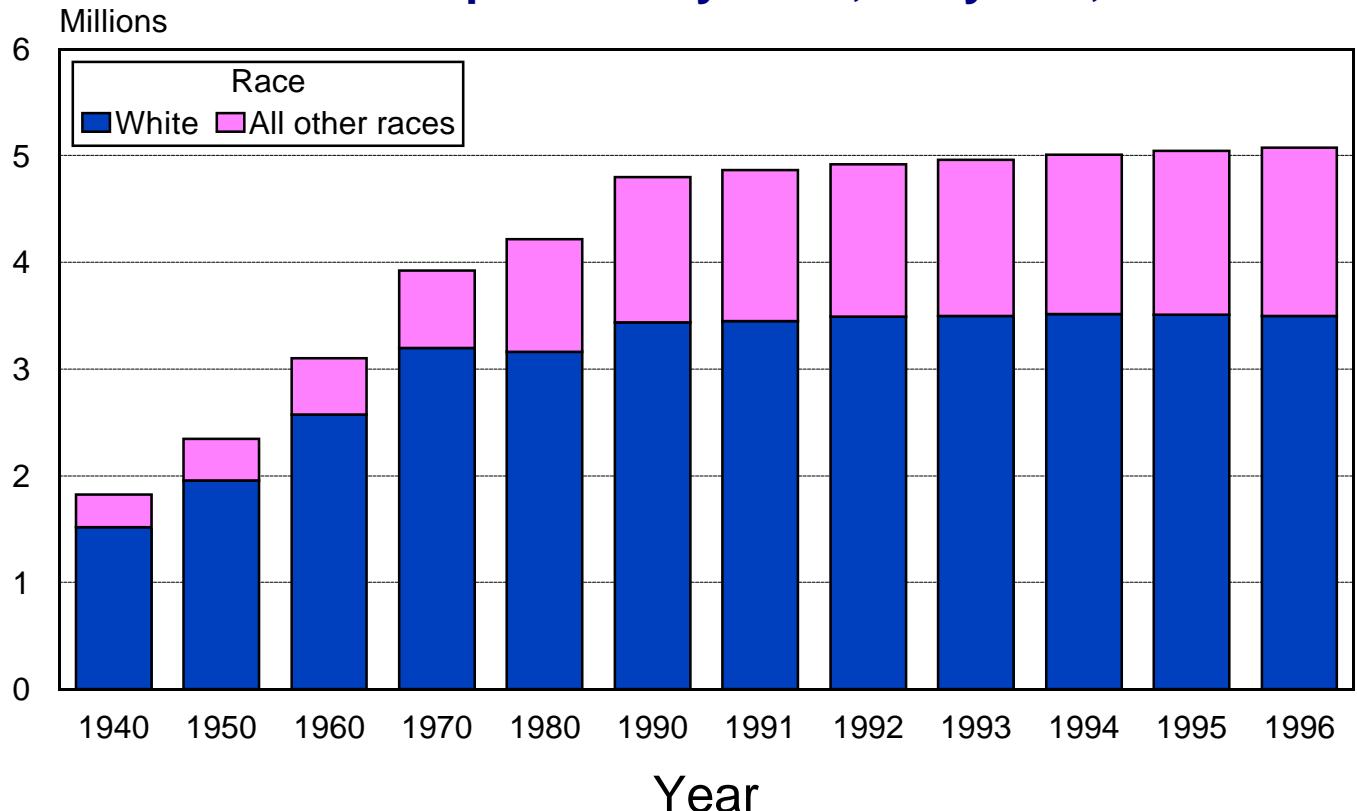

Divorces

- ! There were 16,930 **divorces and annulments** in 1996. The majority of persons divorcing had been married between four and nine years, and half reported having children under the age of 18.

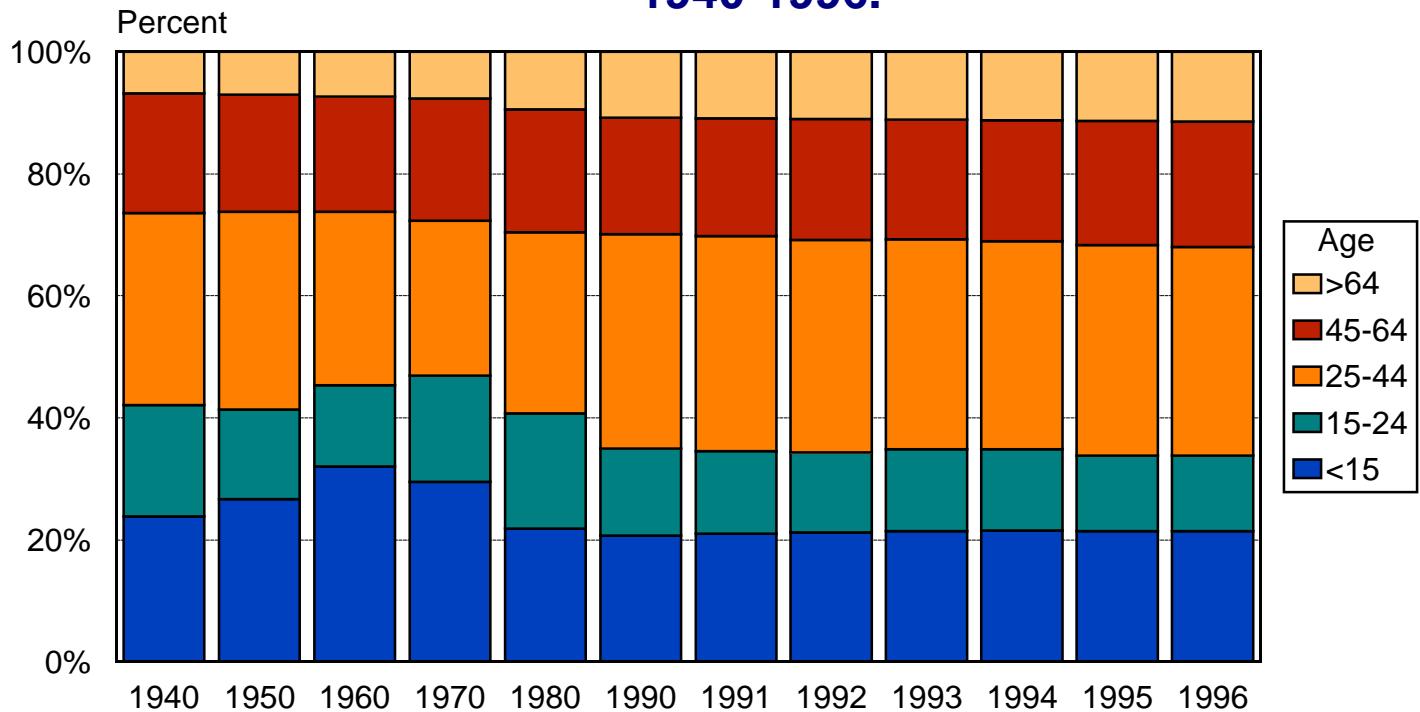

CHARTS

POPULATION

Distribution of the Population by Race, Maryland, 1940-1996.

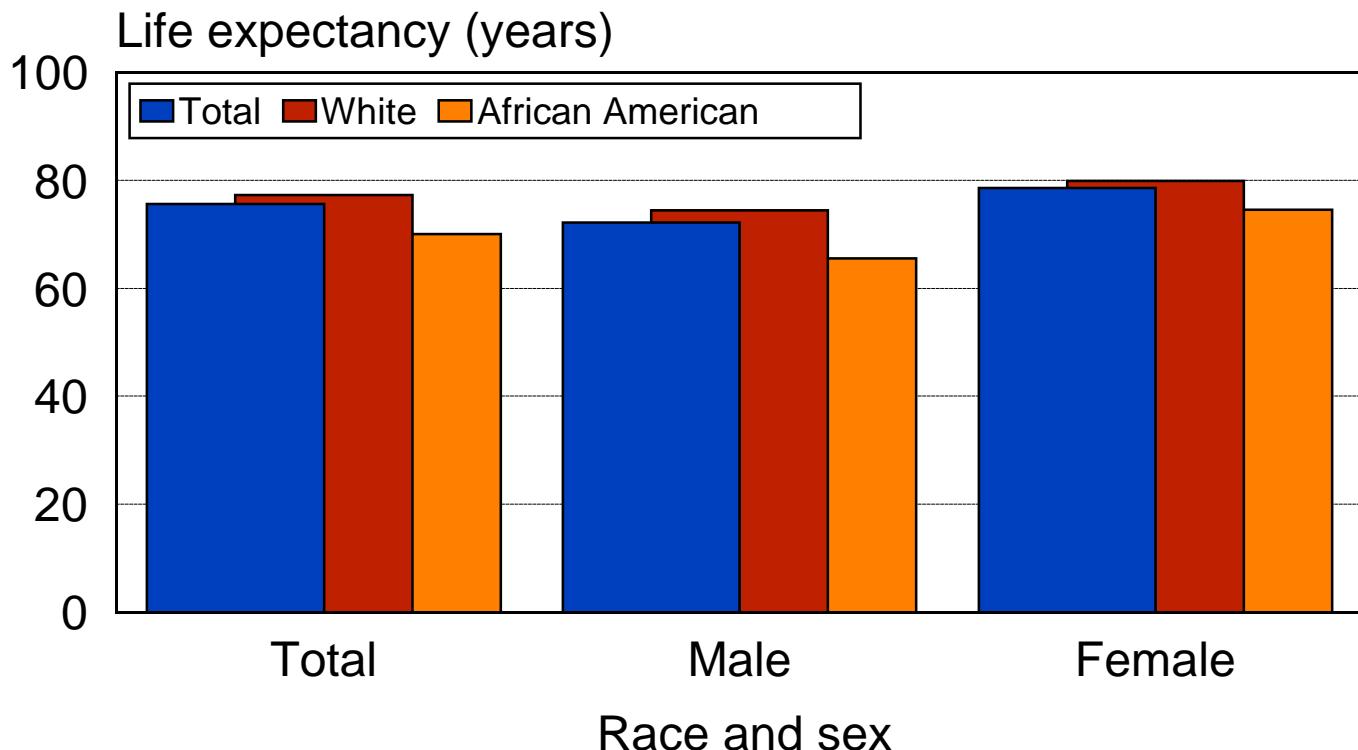

Distribution of the Population by Age, Maryland, 1940-1996.

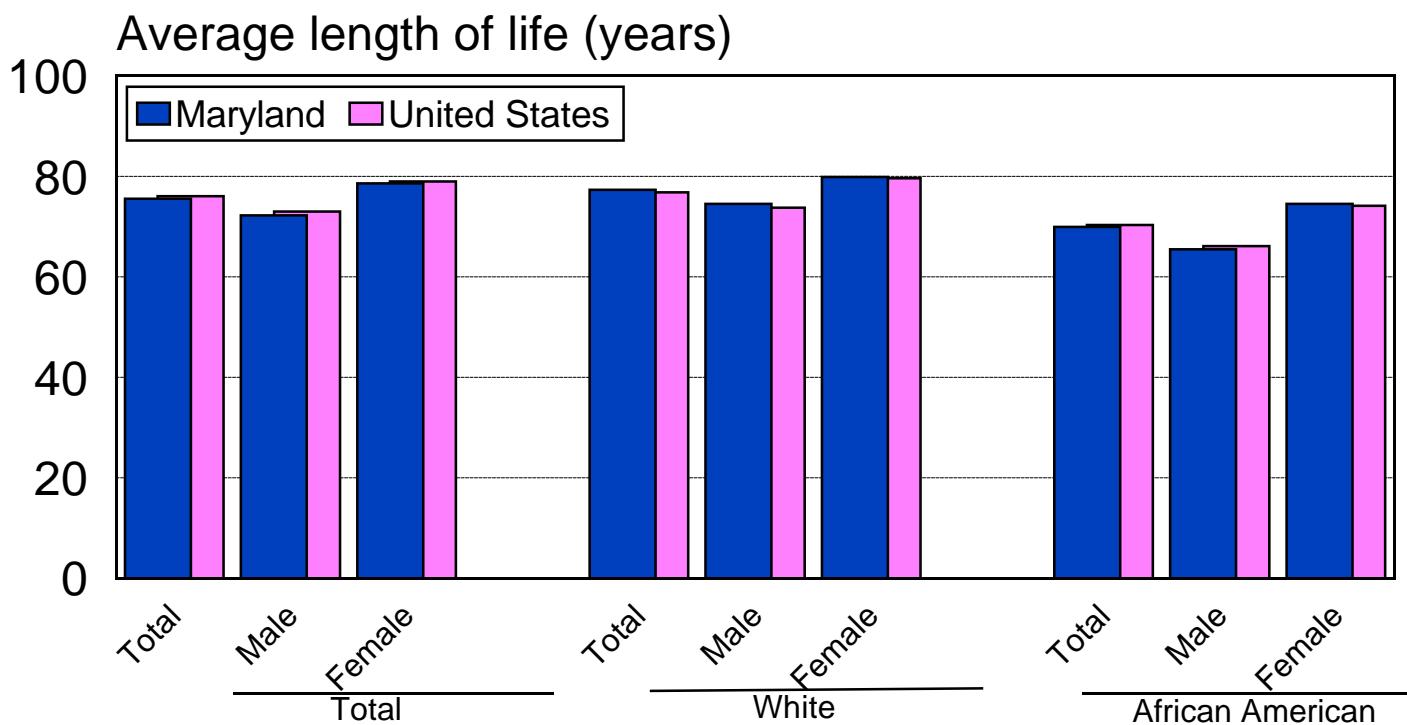

LIFE EXPECTANCY

Average Length of Life by Race and Sex, Maryland, 1996.

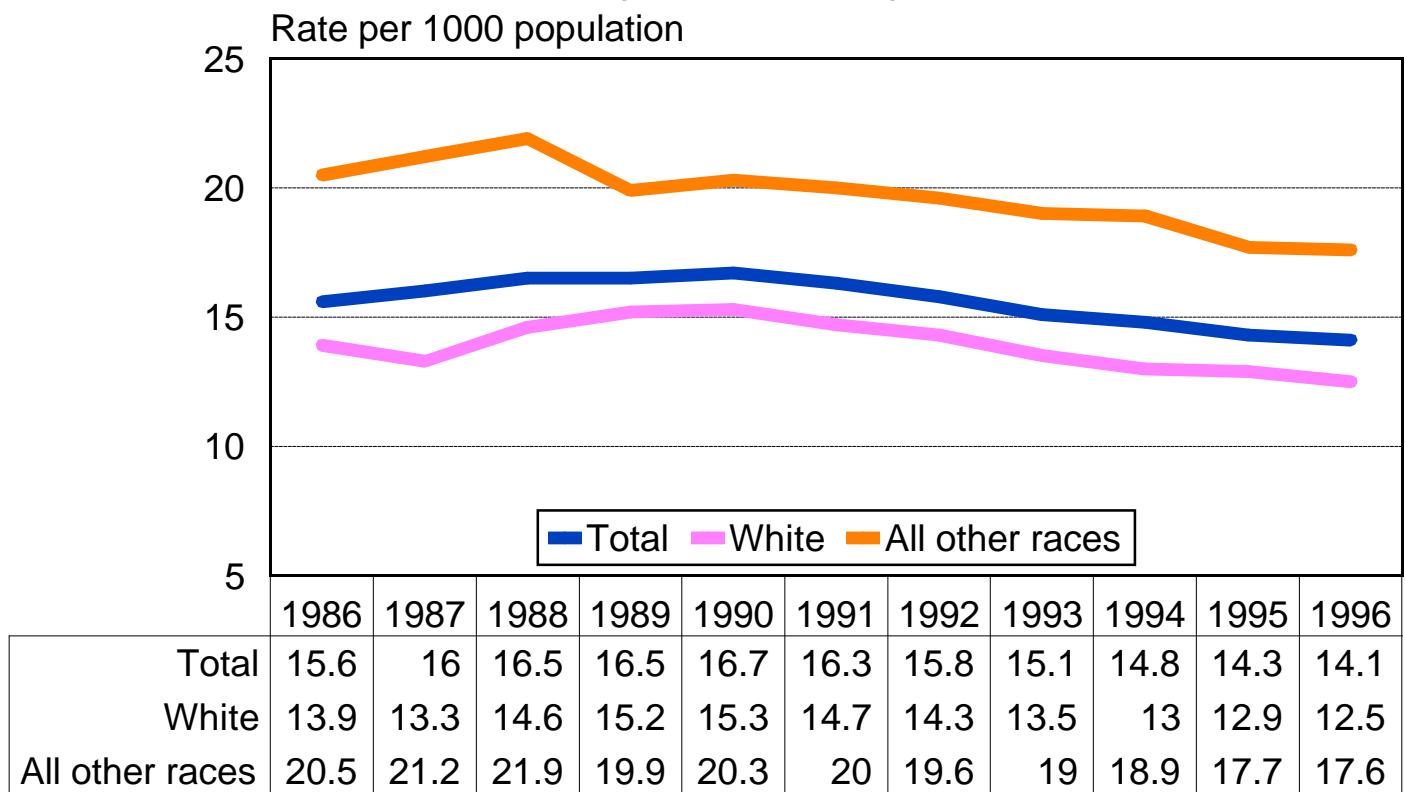

Average Length of Life by Race and Sex, Maryland and the United States, 1996.

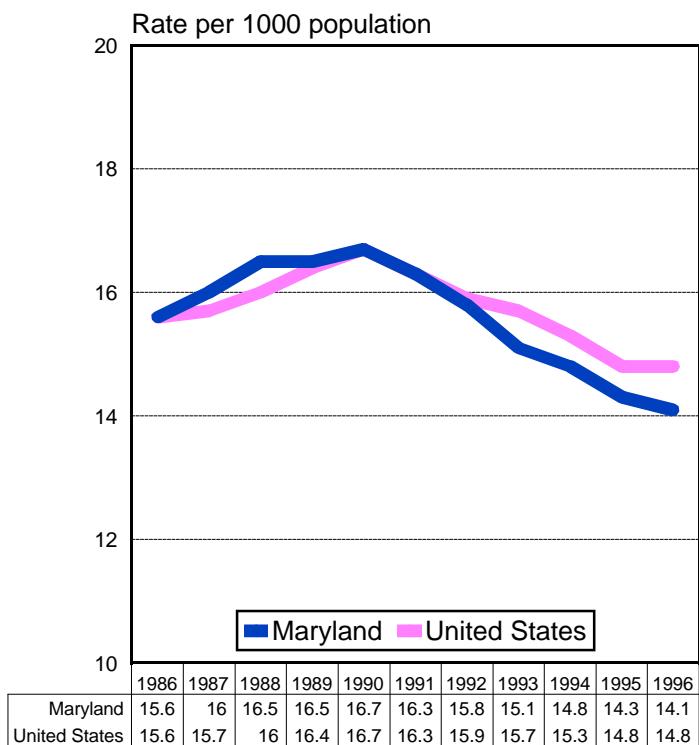

BIRTH RATES

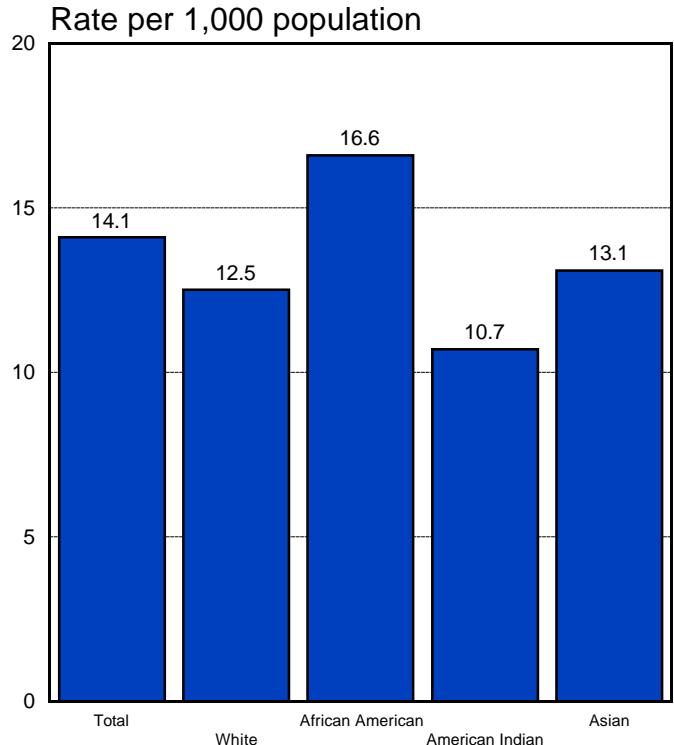

Birth Rate by Race, Maryland, 1986-1996.

Birth Rate, Maryland and the United States, 1986-1996.

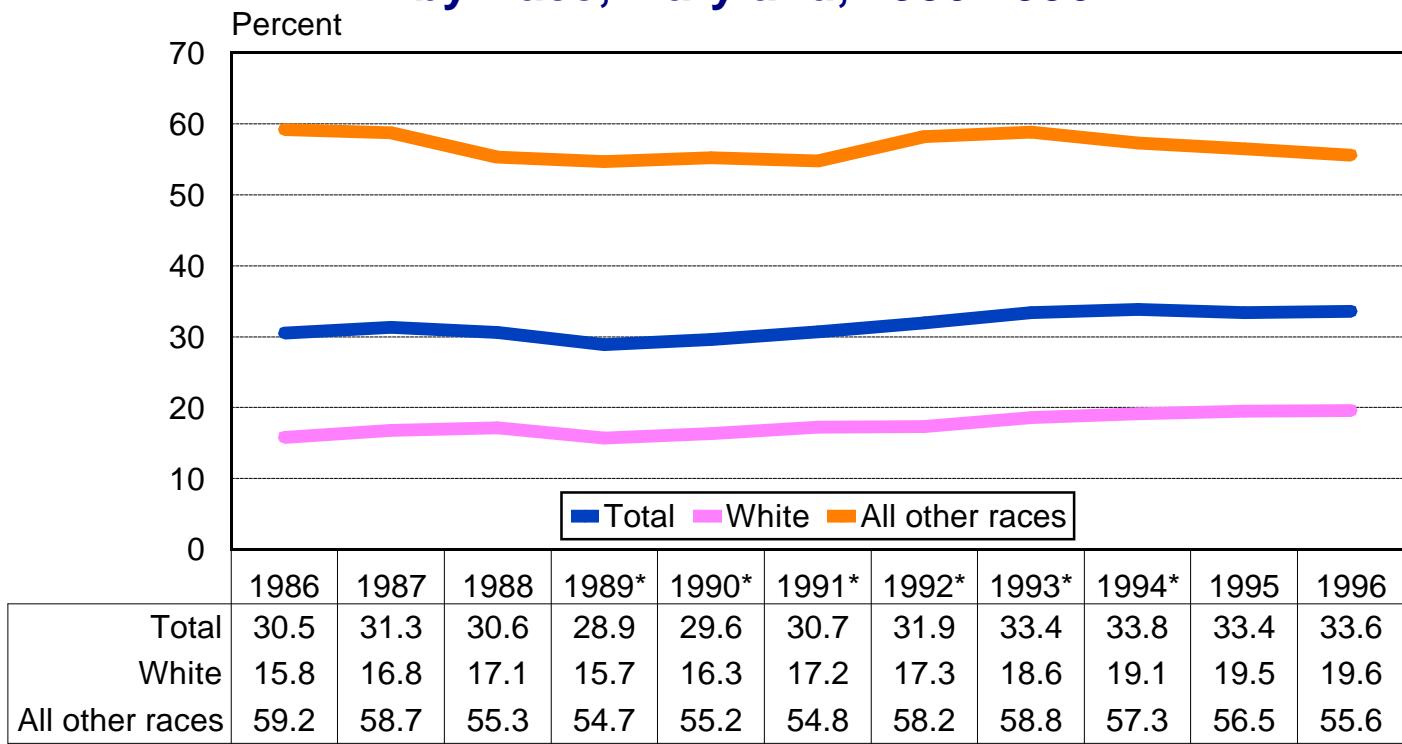

Birth Rate by Detailed Race, Maryland, 1996.

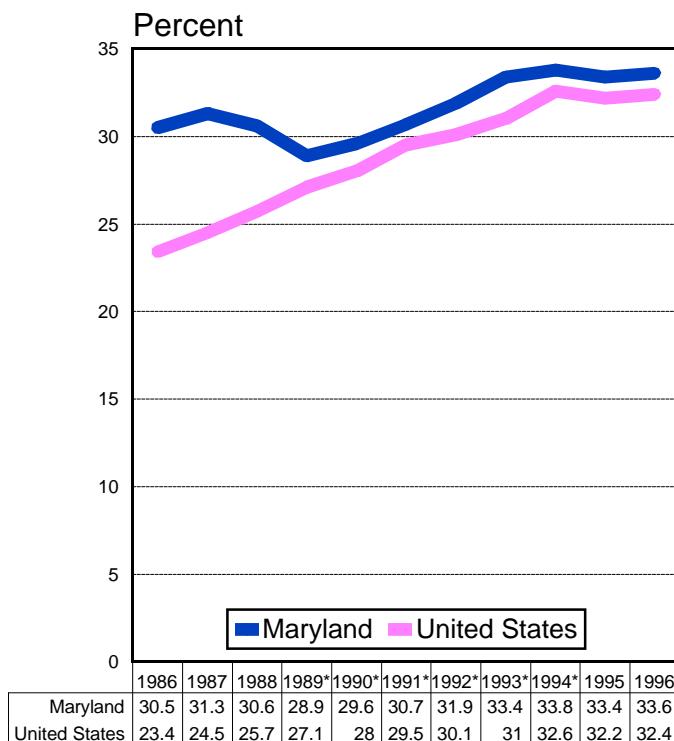

BIRTHS TO UNMARRIED WOMEN

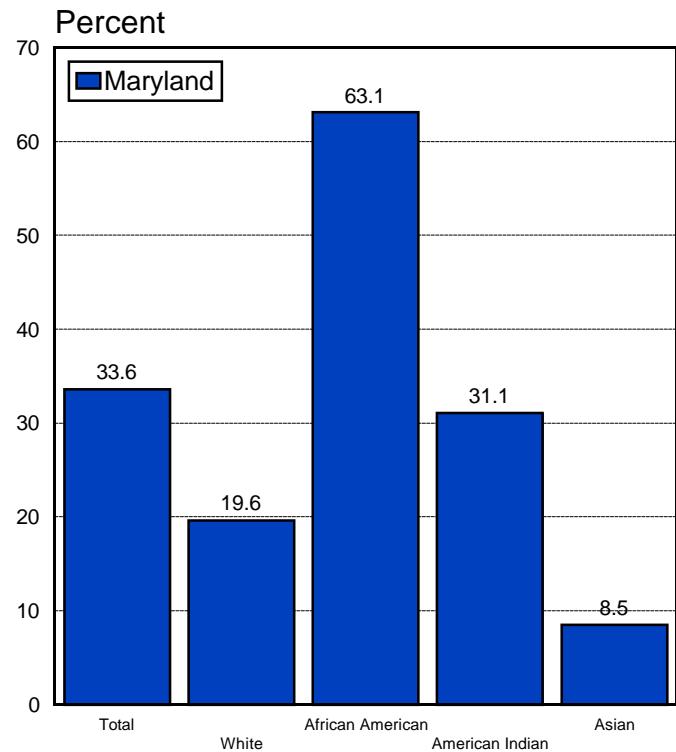

Percentage of Births to Unmarried Women by Race, Maryland, 1986-1996.

Percentage of Births to Unmarried Women, Maryland and the U.S., 1986-1996.

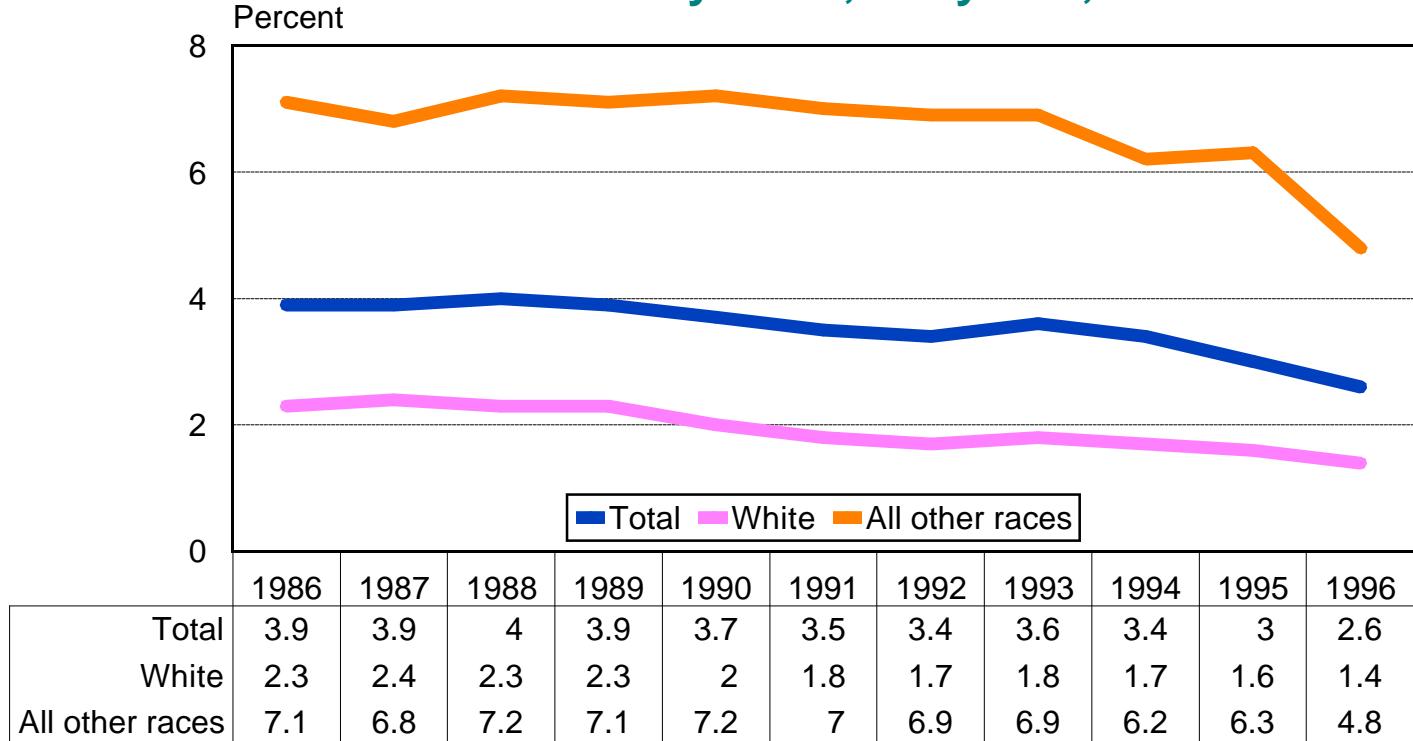

Percentage of Births to Unmarried Women by Detailed Race, Maryland, 1996.

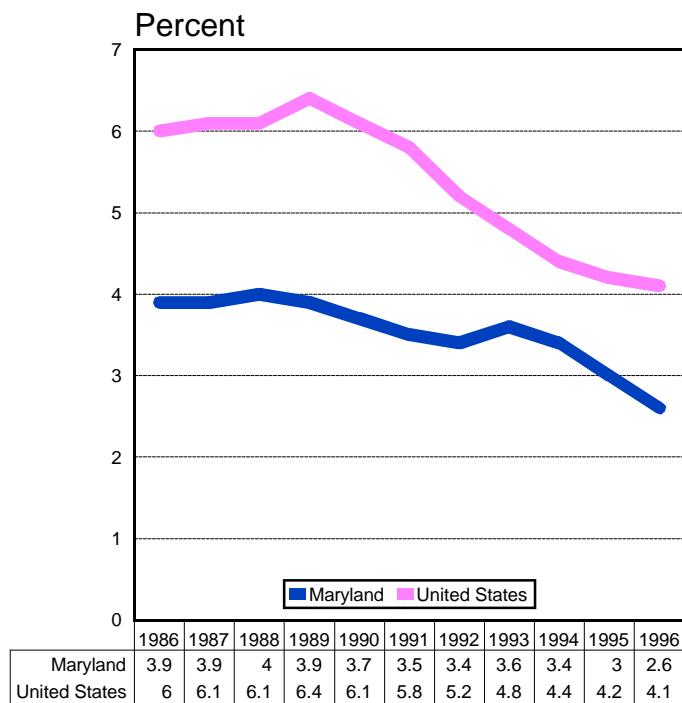

*Maryland figures exclude women for whom marital status was unknown.

PRENATAL CARE

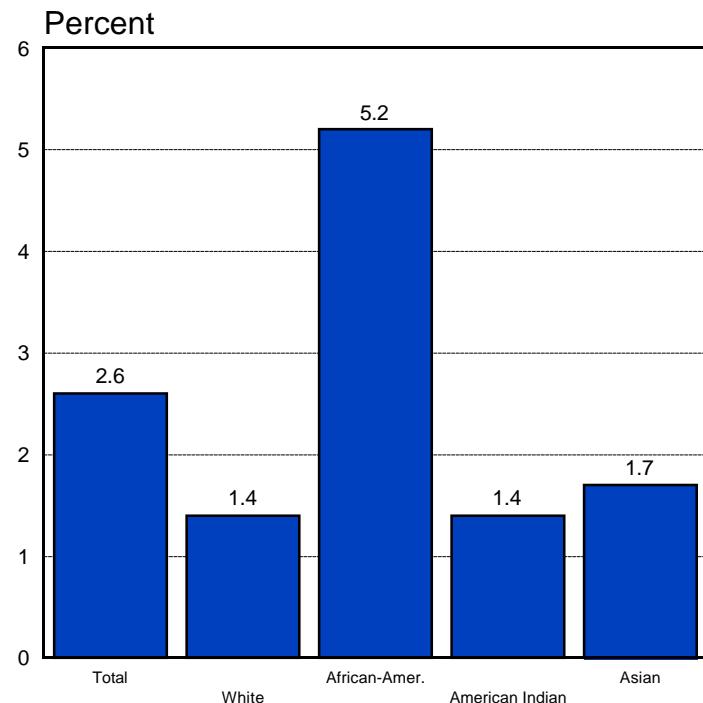

Percentage of Births to Women Receiving Late or No Prenatal Care by Race, Maryland, 1986-1996.*

Percentage of Women Receiving Late or No Prenatal Care, Maryland and the U.S., 1986-1996.*

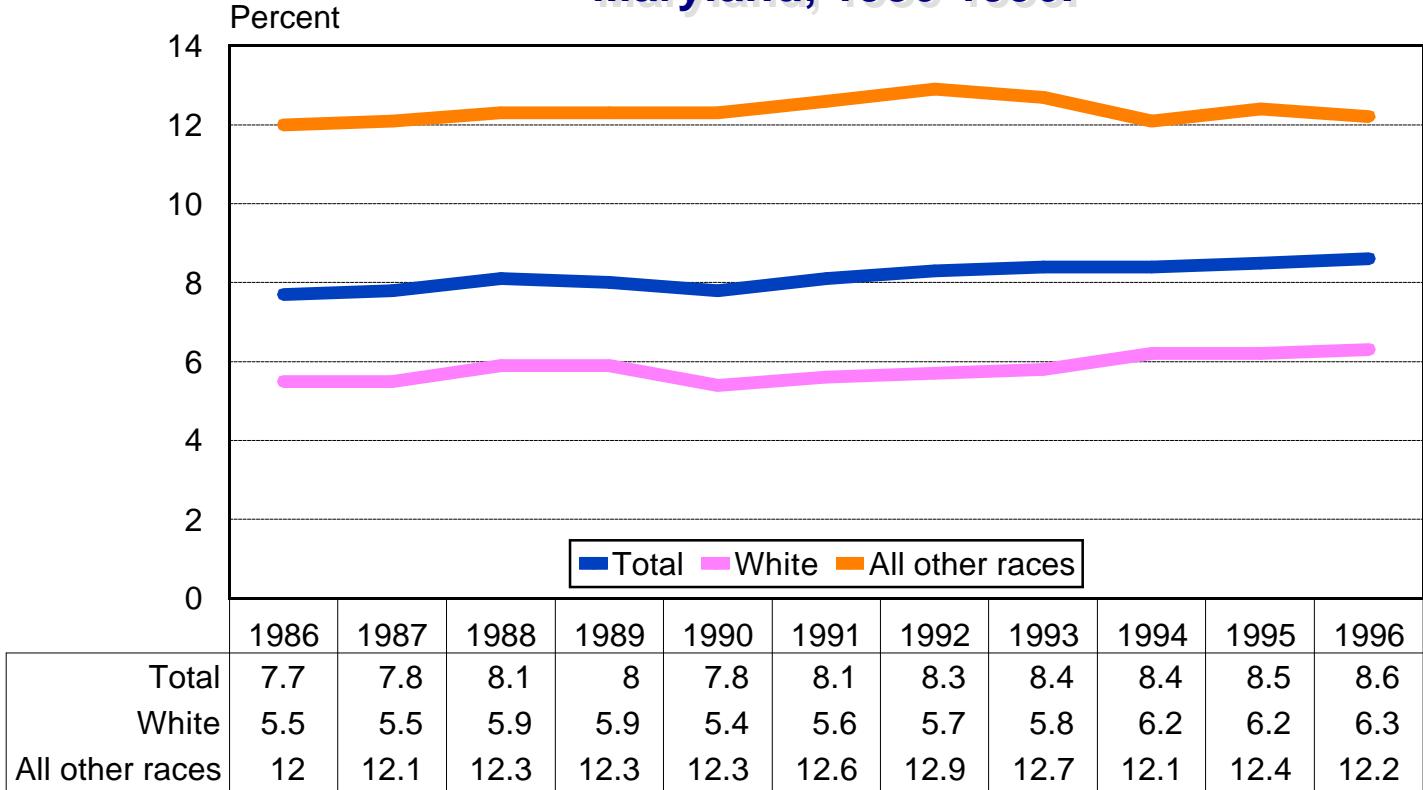

Percentage of Births to Women Receiving Late or No Prenatal Care by Detailed Race, Maryland, 1996.*

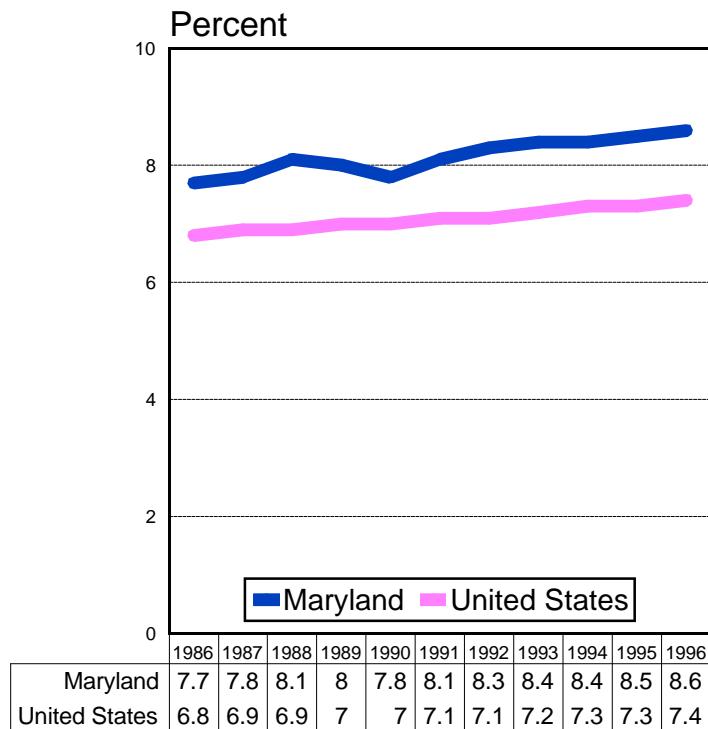

*Maryland figures exclude women for whom timing of prenatal care was unknown. Late care refers to prenatal care which begins during the third trimester of pregnancy.

LOW BIRTH WEIGHT

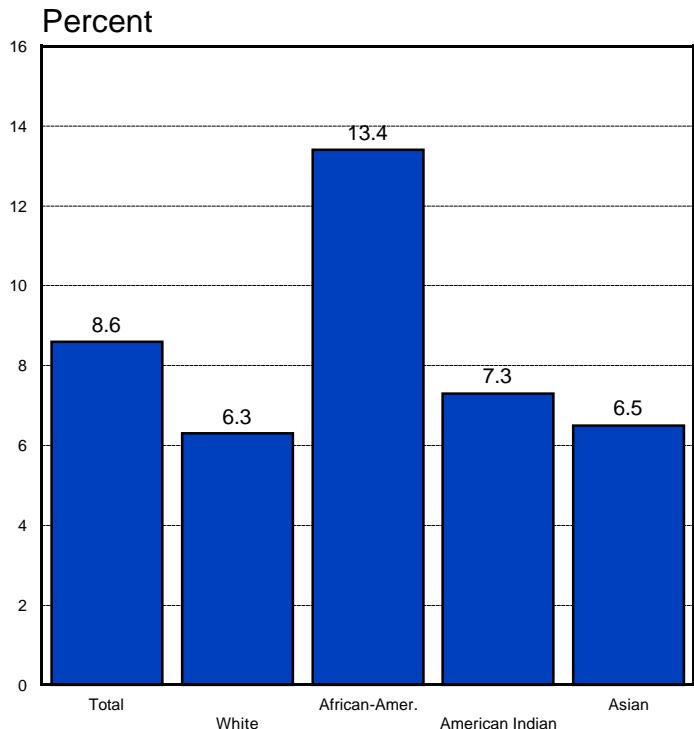

Percentage of Low Birth Weight Infants by Race, Maryland, 1986-1996.

Percentage of Low Birth Weight Infants, Maryland and the U.S., 1986-1996.

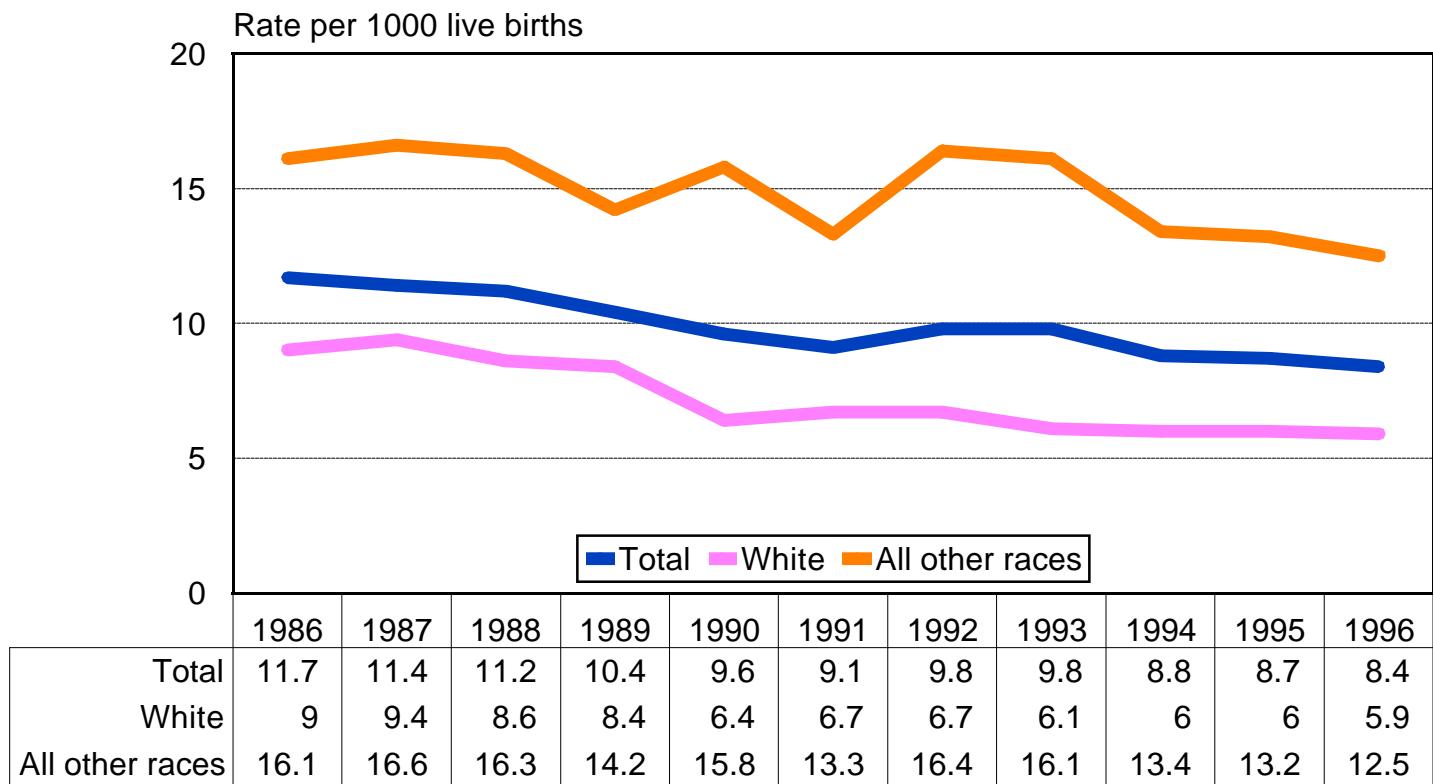

Percentage of Low Birth Weight Infants by Detailed Race, Maryland, 1996.

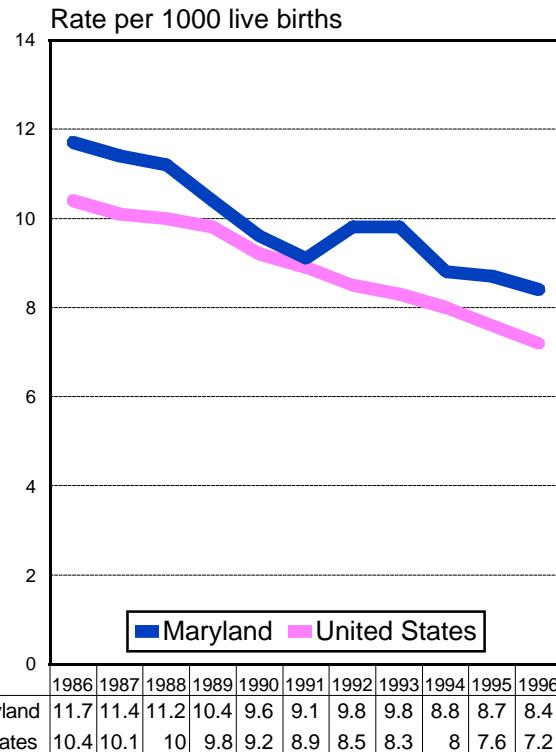

INFANT MORTALITY

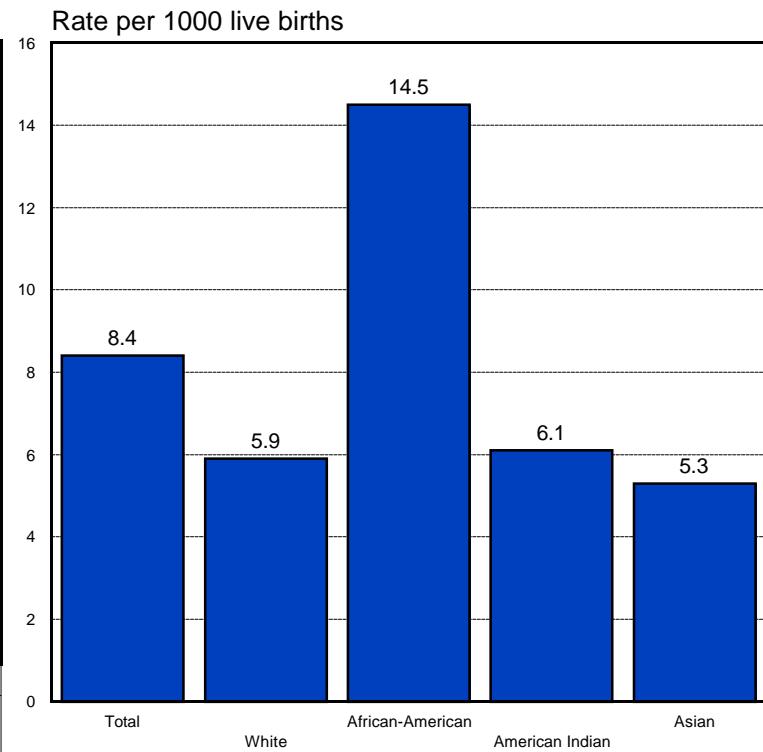

Infant Mortality Rate by Race, Maryland, 1986-1996.

Infant Mortality Rate, Maryland and the United States, 1986-1996.

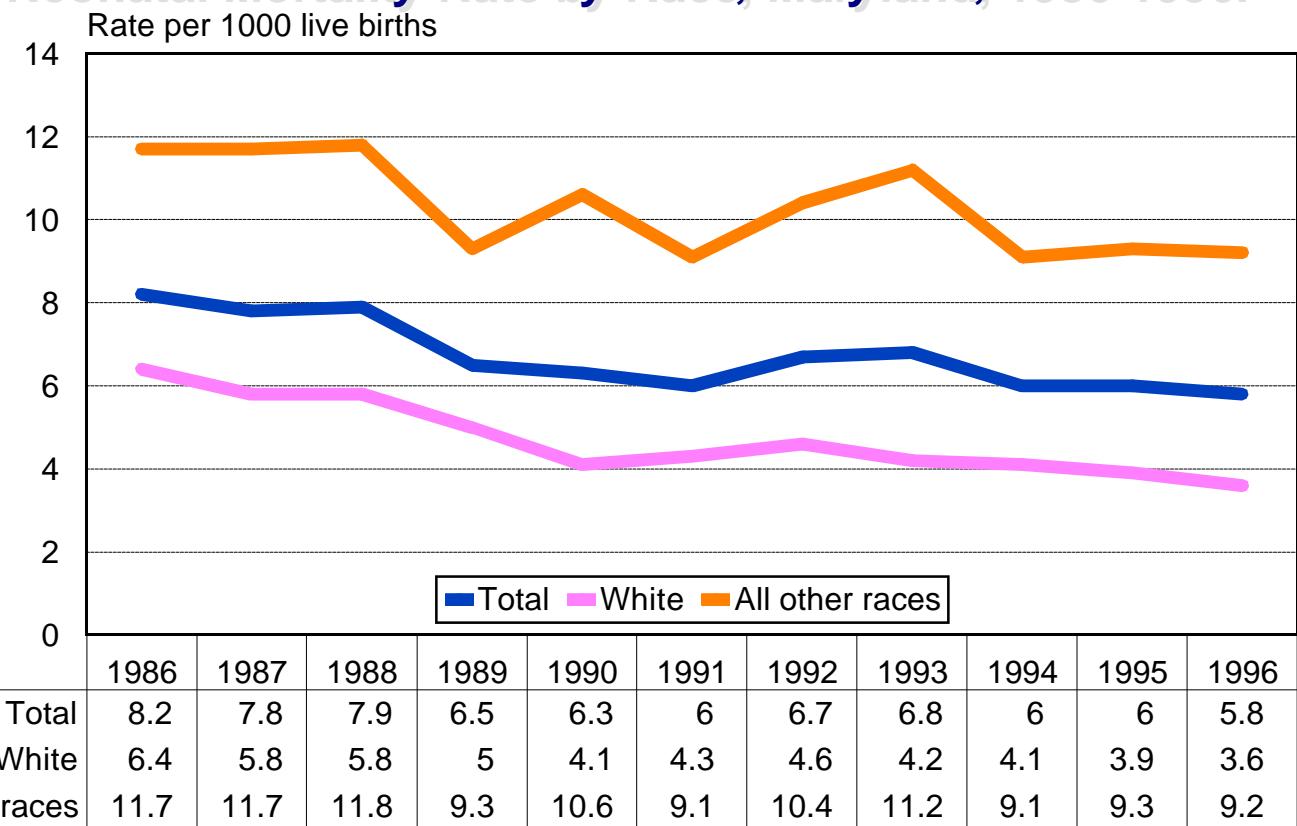

Infant Mortality Rate by Detailed Race, Maryland, 1996.

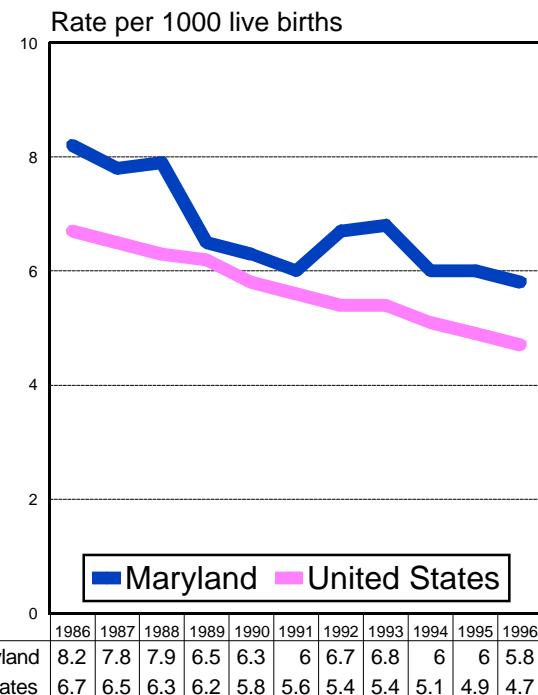

NEONATAL MORTALITY

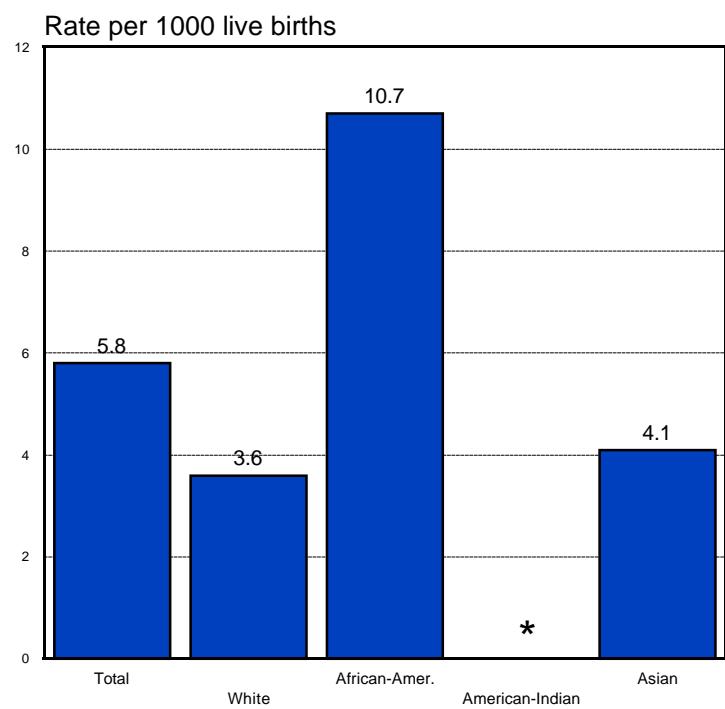

Neonatal Mortality Rate by Race, Maryland, 1986-1996.

Neonatal Mortality Rate , Maryland and the U.S., 1986-1996.

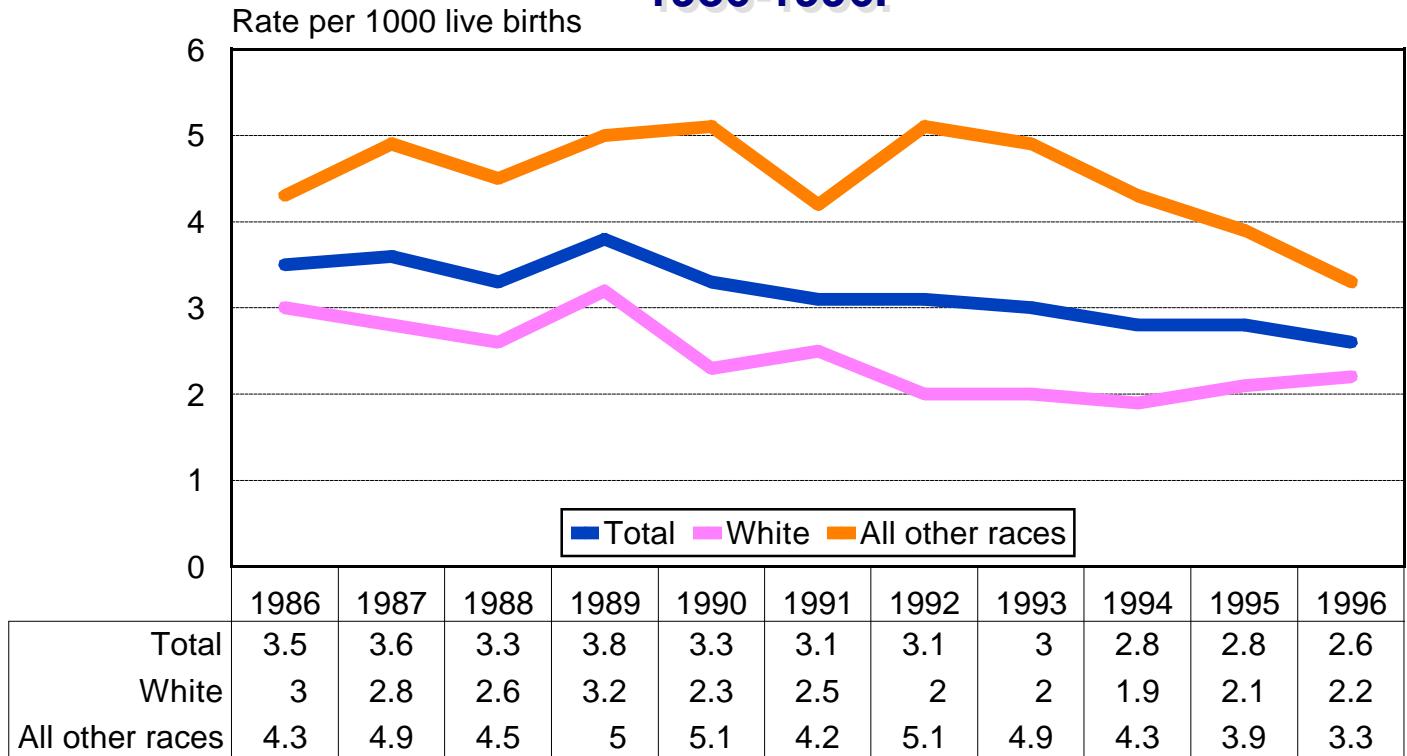

Neonatal Mortality Rate by Detailed Race, Maryland, 1996.

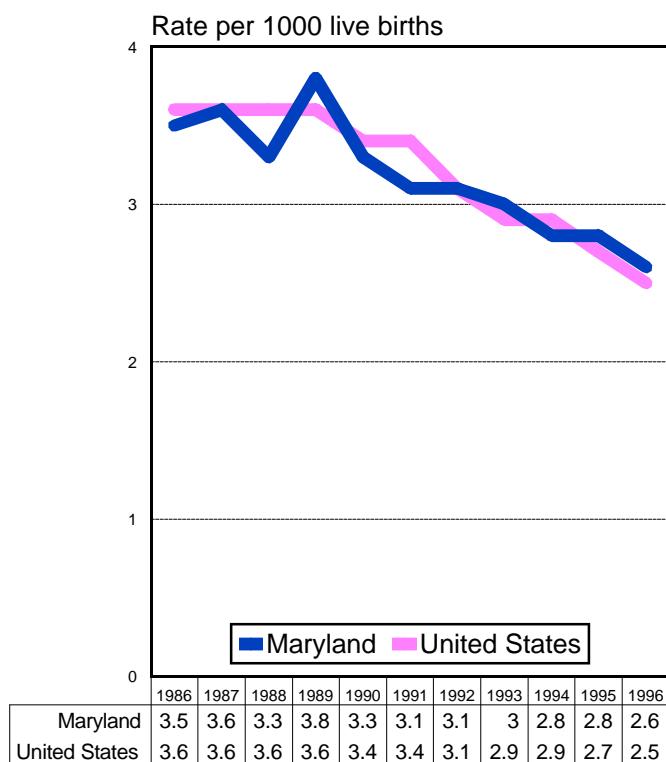

*Age-adjusted rates are not calculated when the number of deaths is less than 10.

POSTNEONATAL MORTALITY

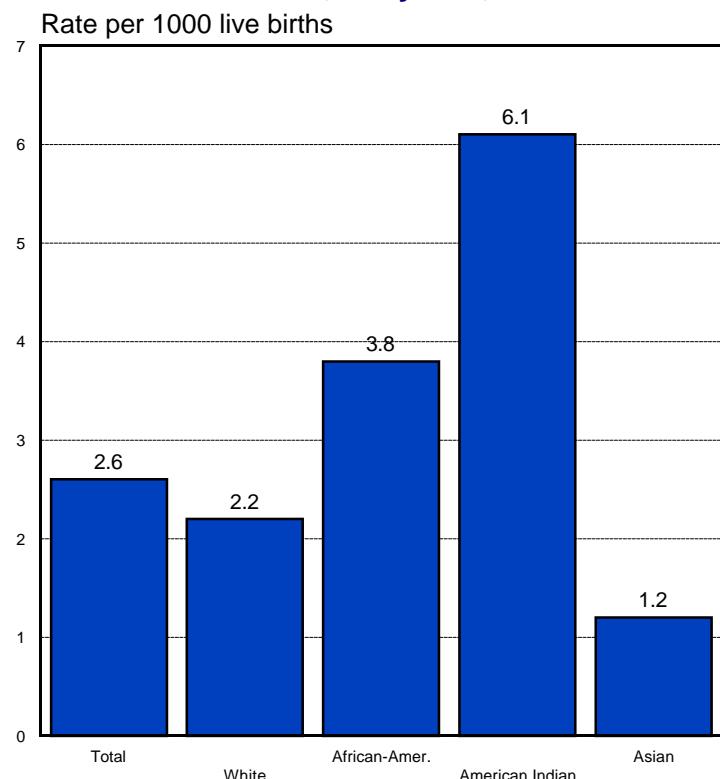

Postneonatal Mortality Rate by Race, Maryland, 1986-1996.

Postneonatal Mortality Rate, Maryland and the United States, 1986-1996.

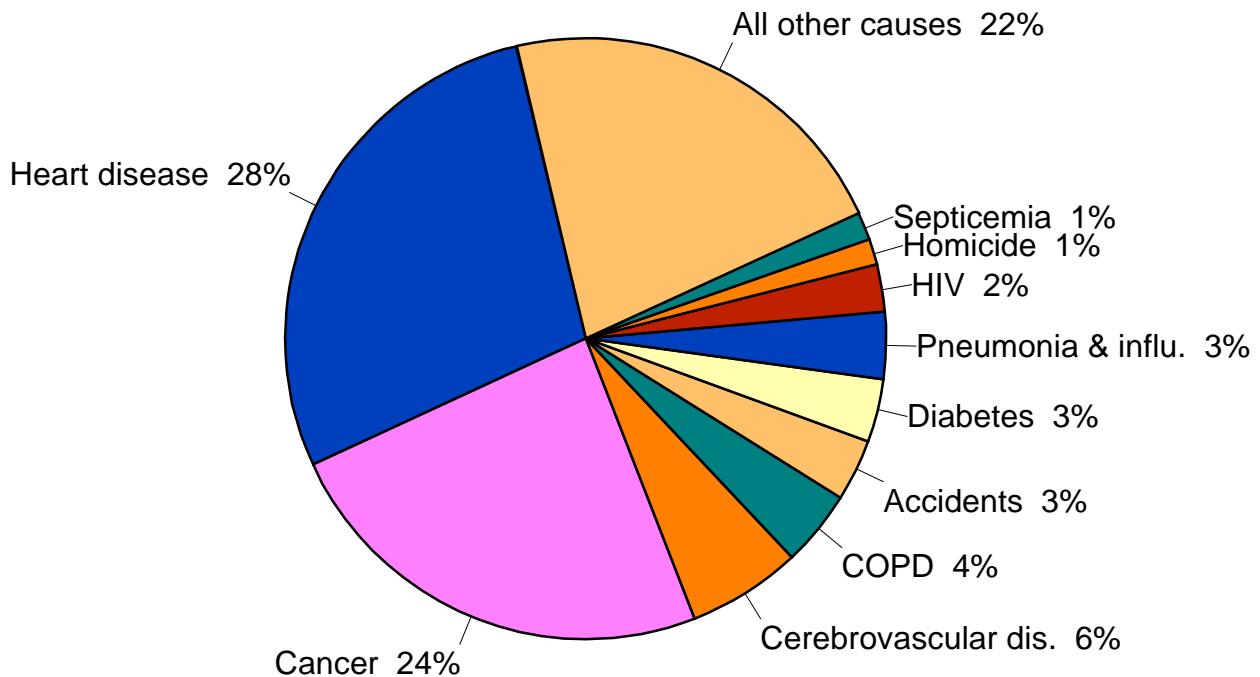

Postneonatal Mortality Rate by Detailed Race, Maryland, 1996.

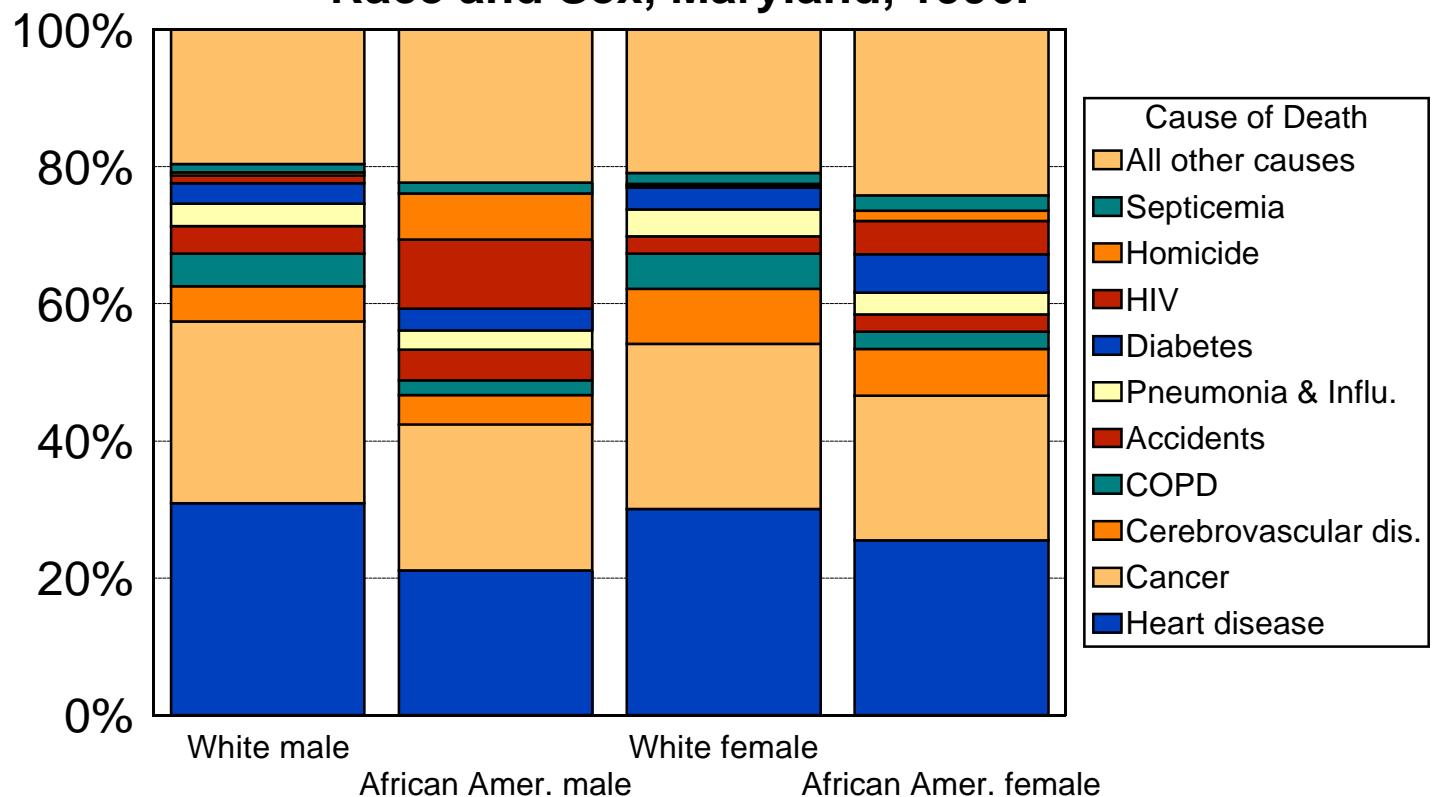

CAUSE OF DEATH

Percent Distribution of Deaths by Cause, Maryland, 1996.

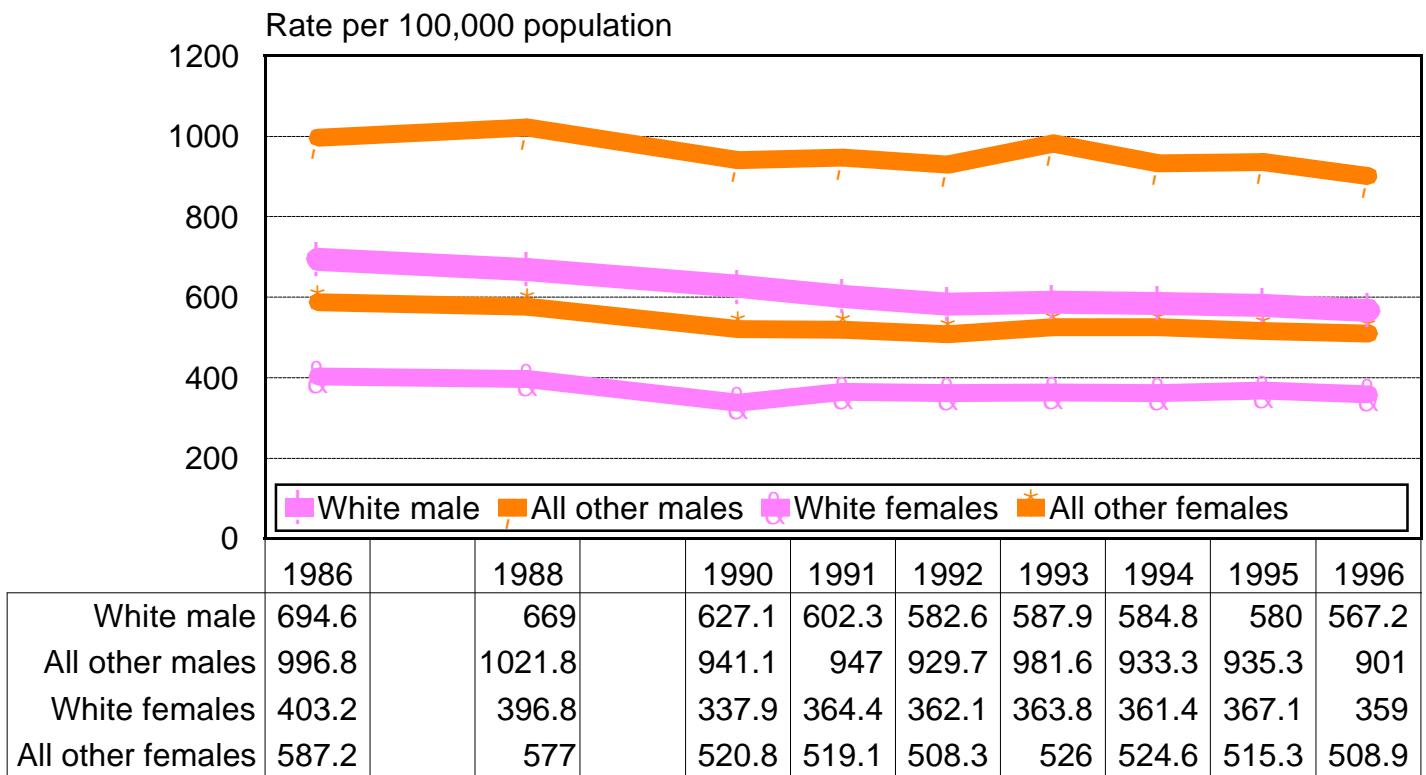

Percent Distribution of Deaths by Cause of Death, Race and Sex, Maryland, 1996.

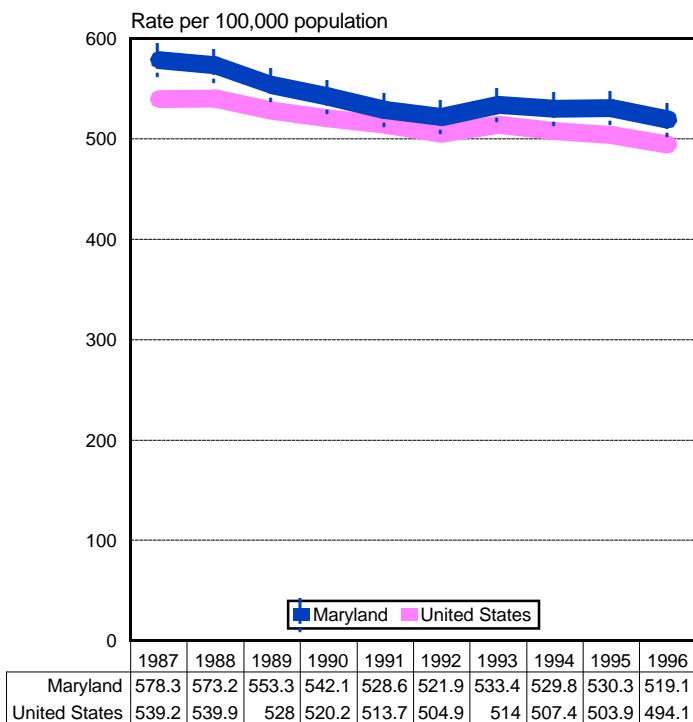

MORTALITY

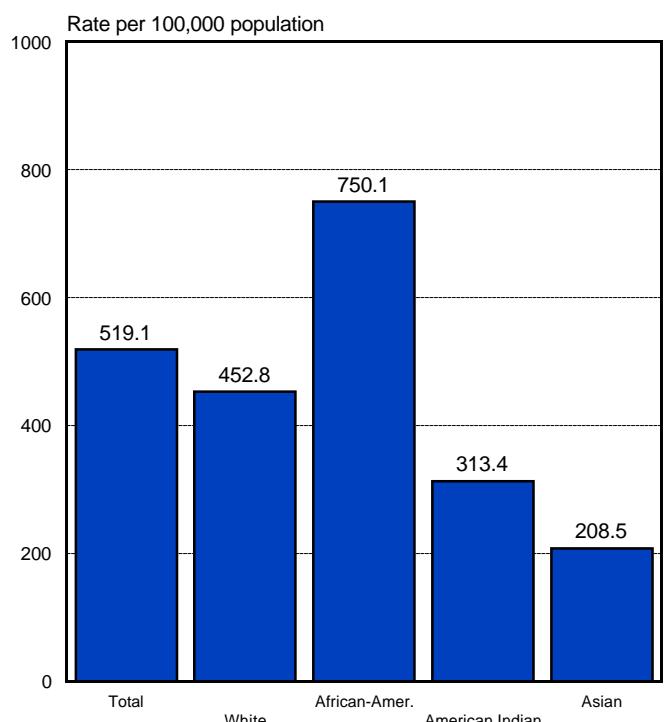

Age-adjusted Mortality Rate for All Causes of Death by Race and Sex, Maryland, 1986-1996.

Age-Adjusted Death Rate for All Causes of Death, Maryland and the U.S., 1987-1996.

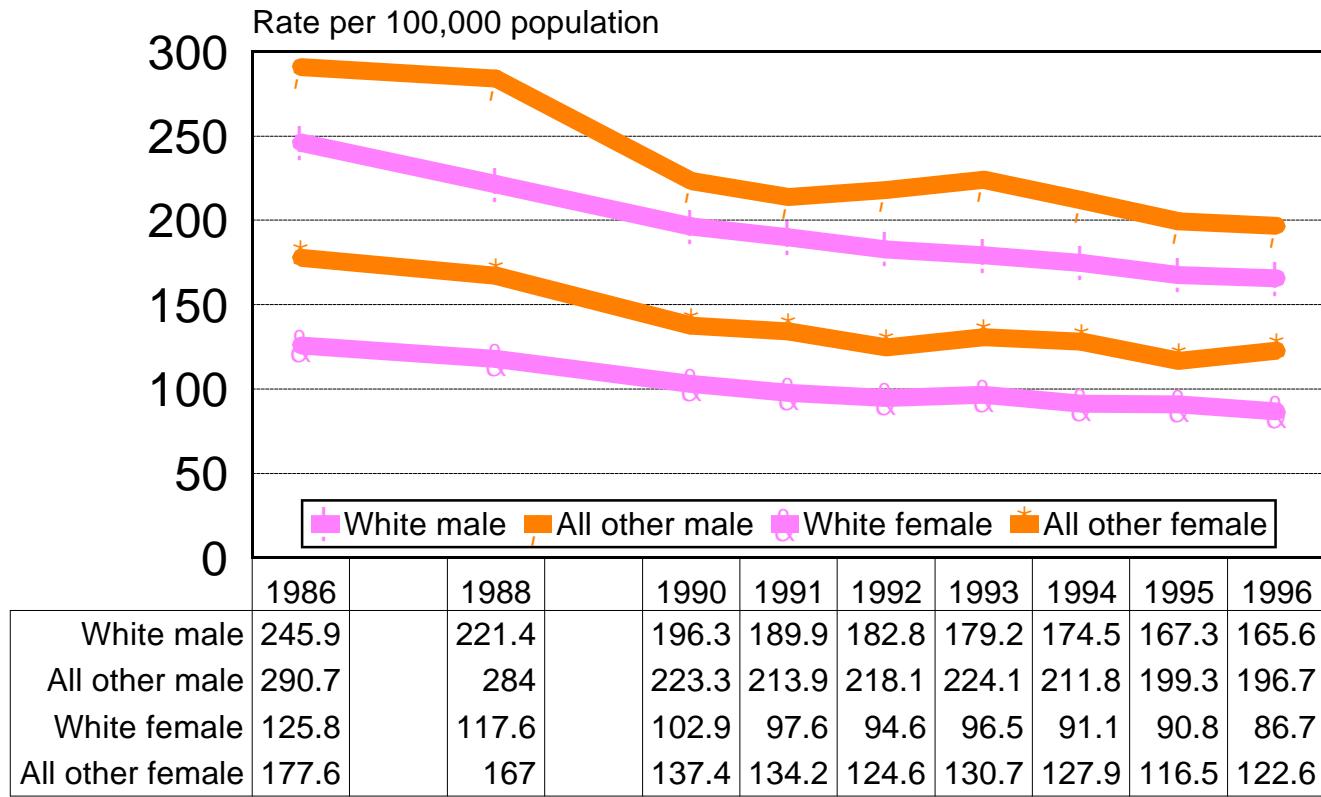

Age-Adjusted Death Rate for All Causes of Death by Detailed Race, Maryland, 1996.

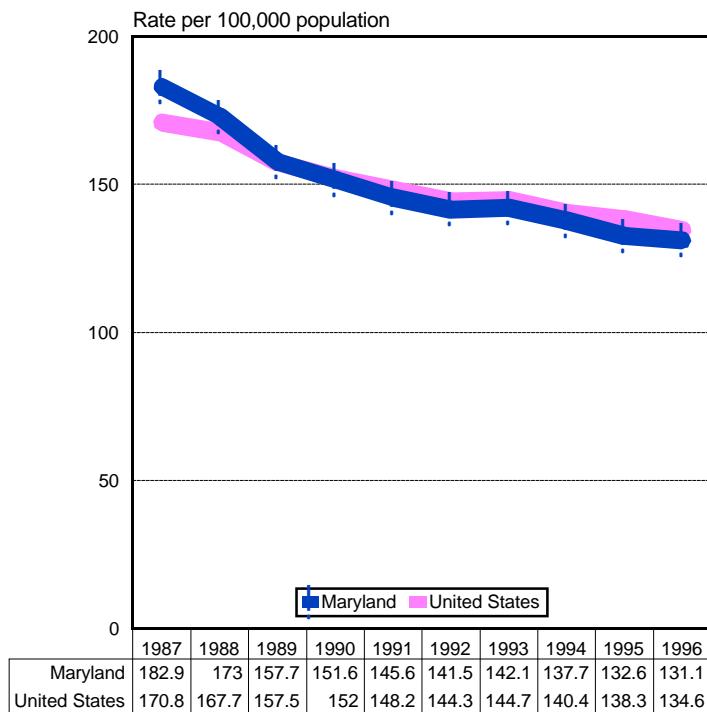

DISEASES OF THE HEART

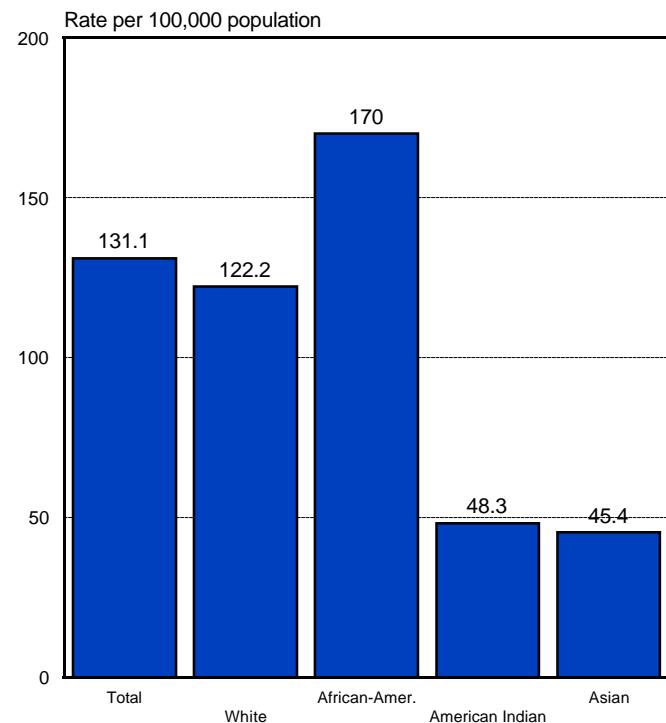

Age-Adjusted Death Rate for Diseases of the Heart by Race and Sex, Maryland, Selected Years, 1986 to 1996.

Age-Adjusted Death Rate for Diseases of the Heart, Maryland and the U.S., 1987-1996.

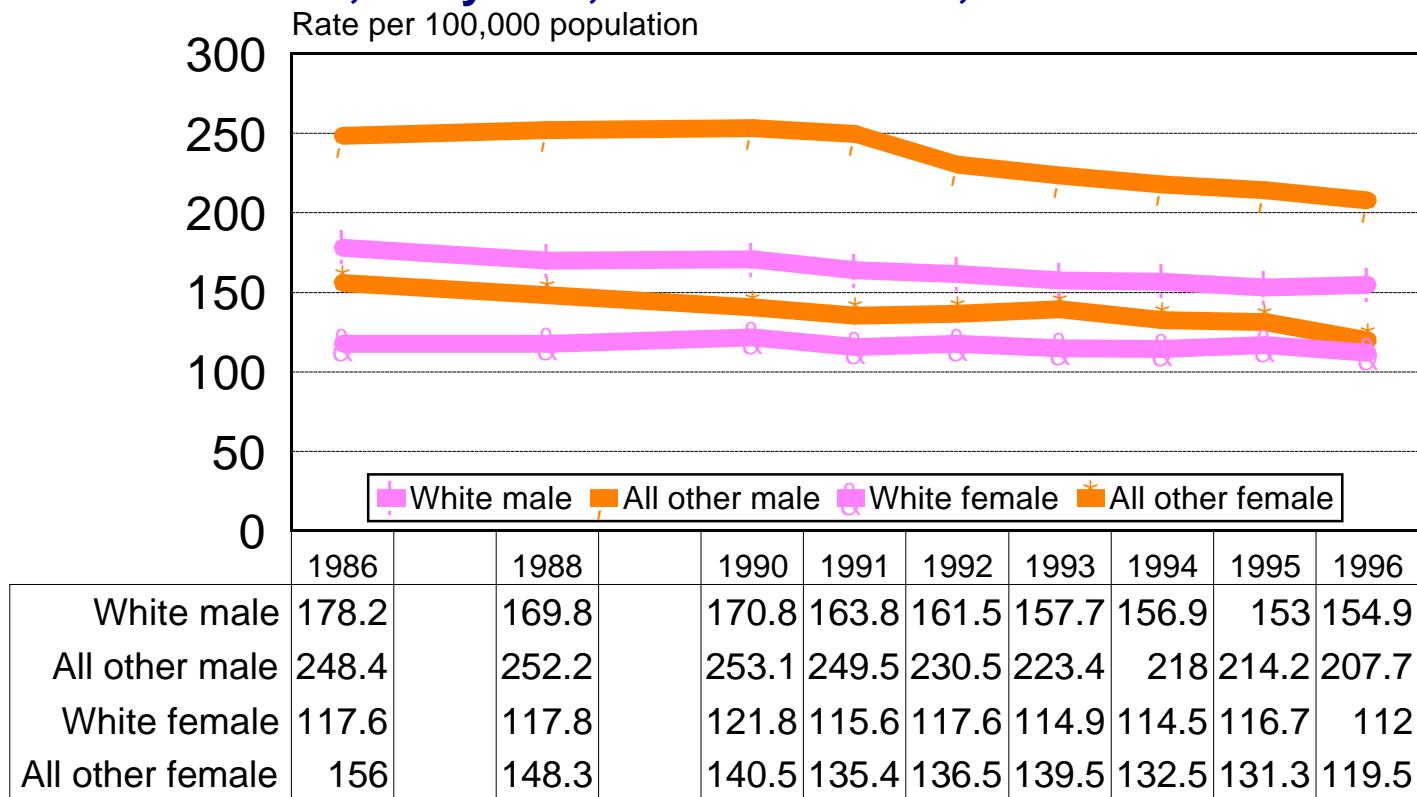

Age-Adjusted Death Rate for Diseases of the Heart by Detailed Race, Maryland, 1996.

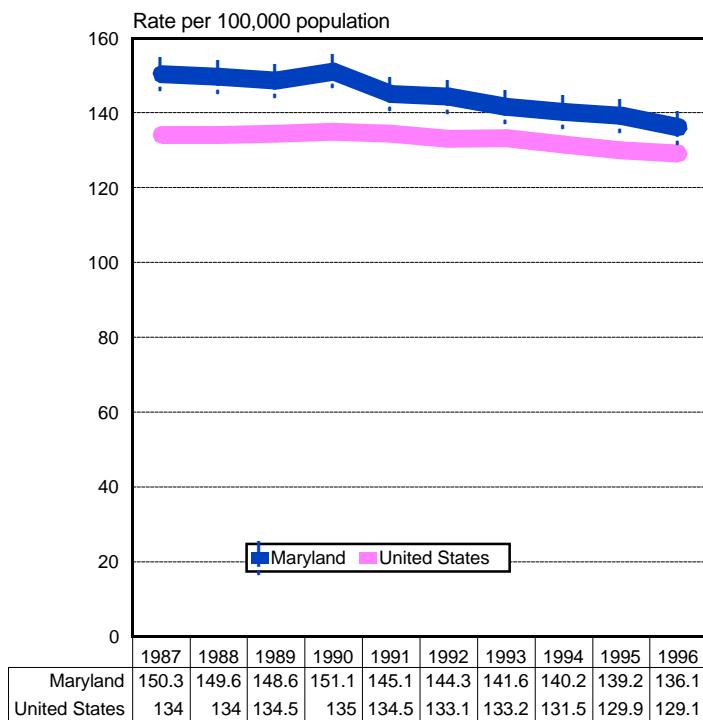

MALIGNANT NEOPLASMS

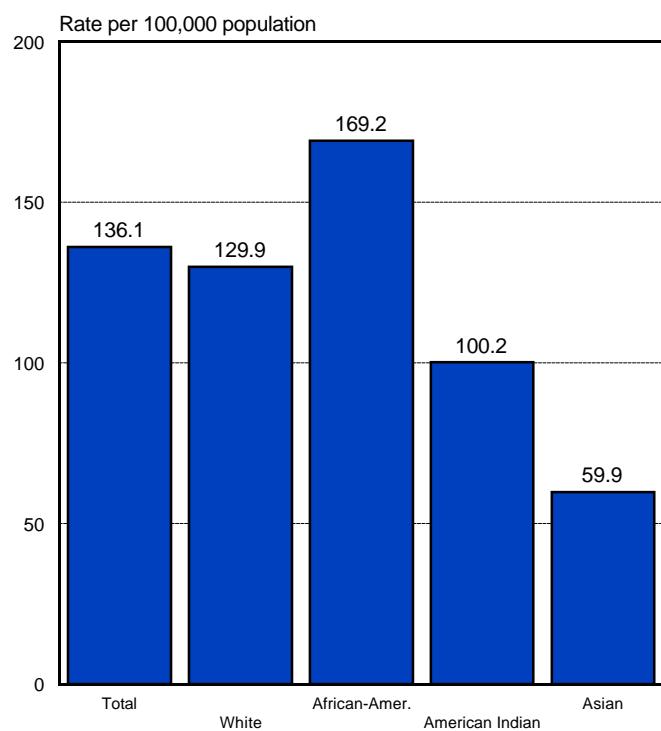

Age-Adjusted Death Rate for Malignant Neoplasms by Race and Sex, Maryland, Selected Years, 1986 to 1996.

Age-adjusted Mortality Rate for Malignant Neoplasms, Maryland and the U.S., 1987-1996.

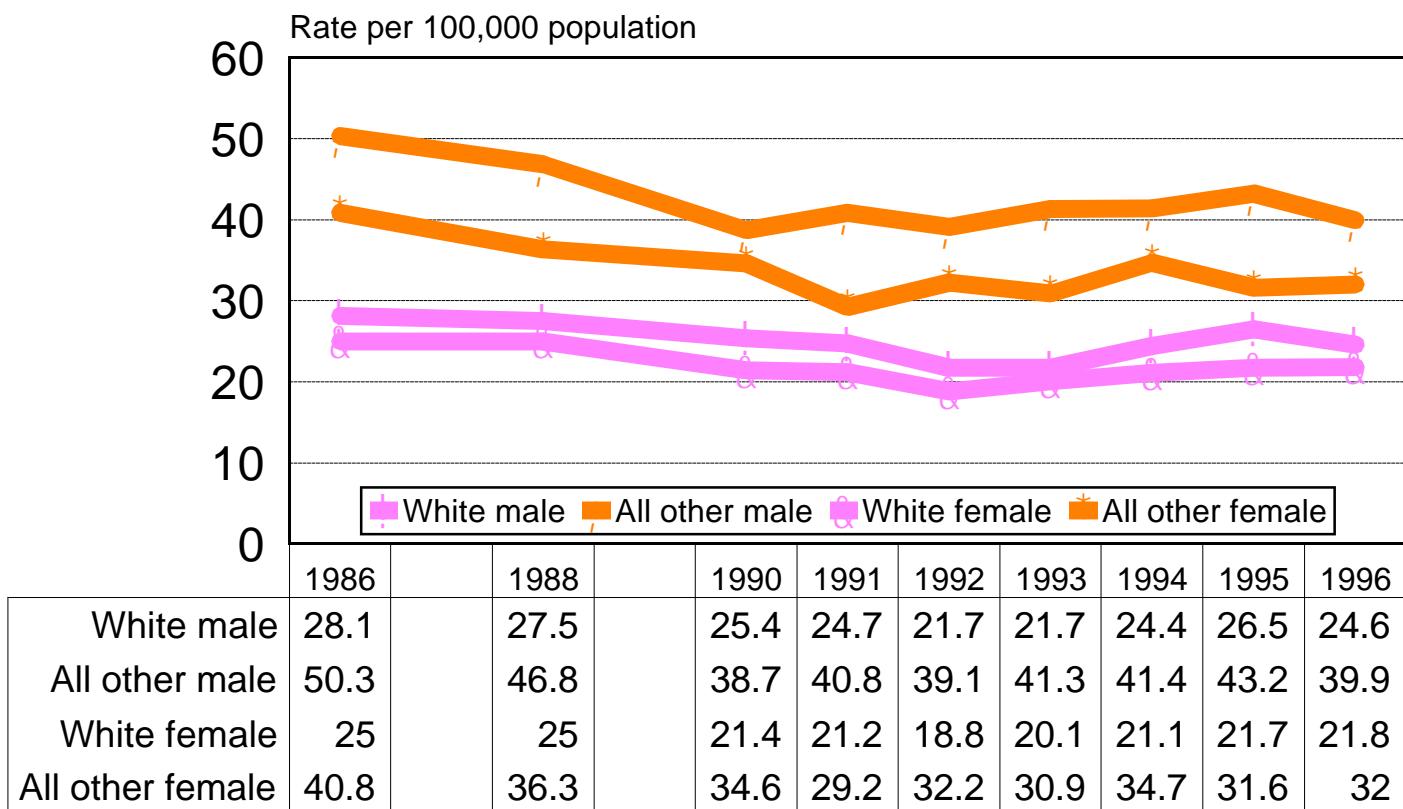

Age-Adjusted Death Rate for Malignant Neoplasms by Detailed Race, Maryland, 1996.

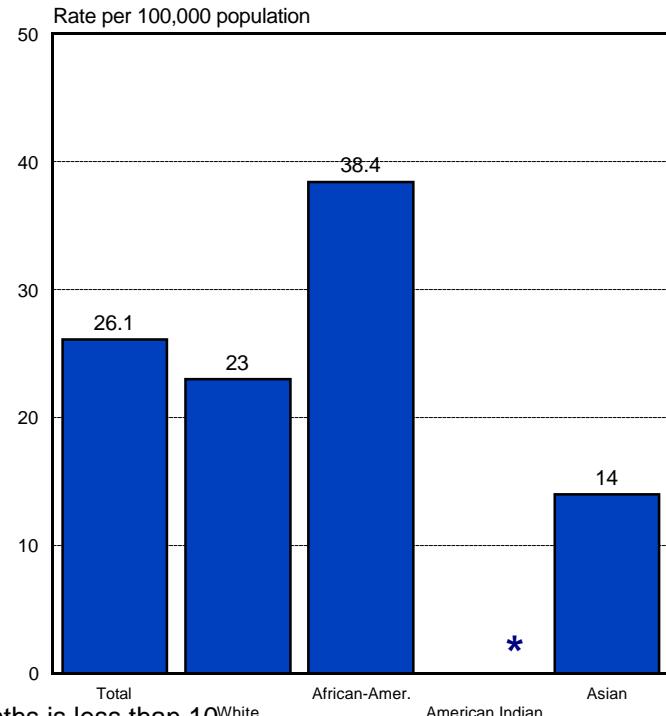

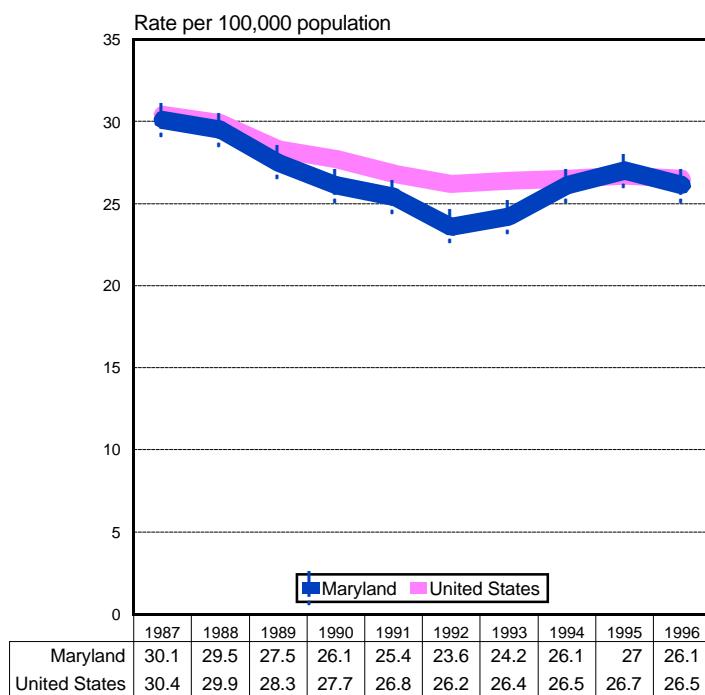

CEREBROVASCULAR DISEASES

Age-Adjusted Death Rate for Cerebrovascular Diseases by Race and Sex, Maryland, Selected Years, 1986 to 1996.

Age-Adjusted Death Rate for Cerebrovascular Diseases, Maryland and the U.S., 1987-1996.

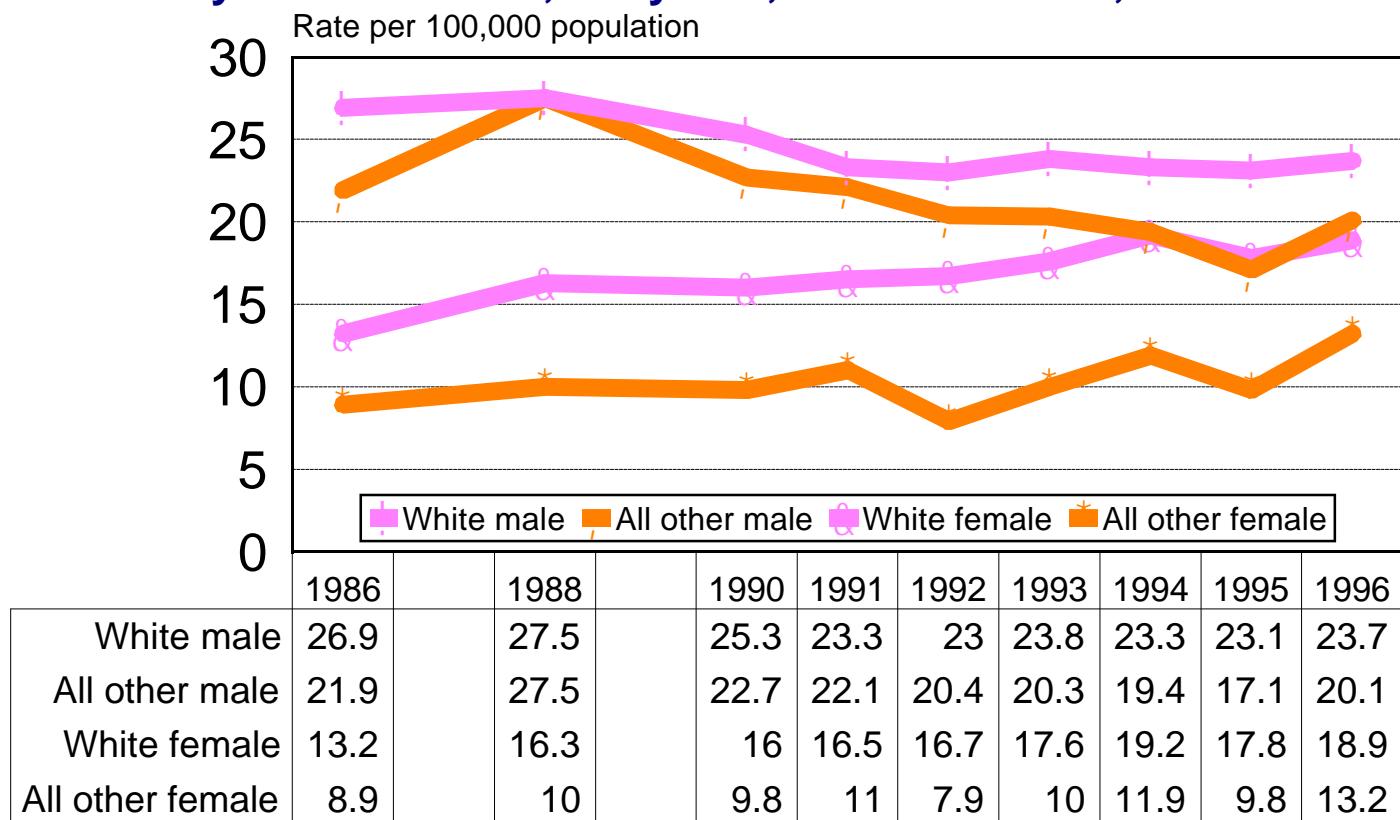

Age-Adjusted Death Rate for Cerebrovascular Diseases by Race and Sex, Maryland, 1996.

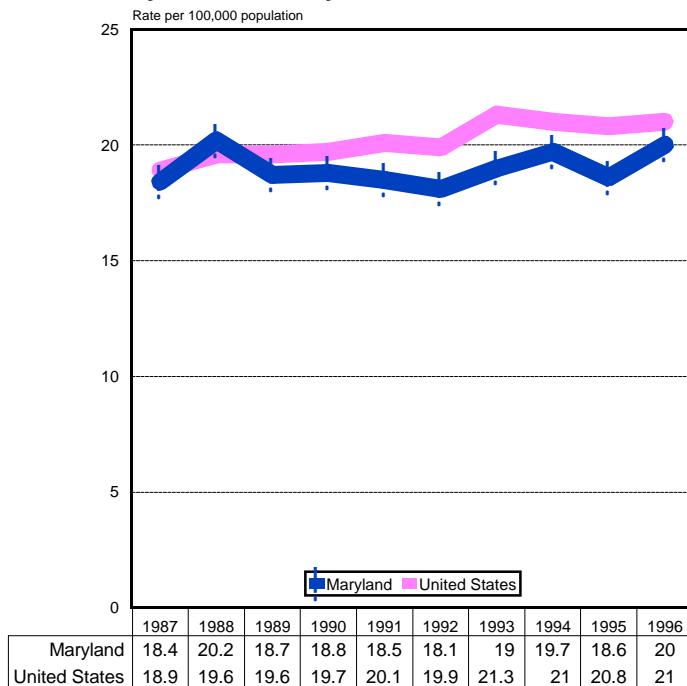

*Age-adjusted rates are not calculated when the number of deaths is less than 10.

CHRONIC OBSTRUCTIVE PULMONARY DISEASE

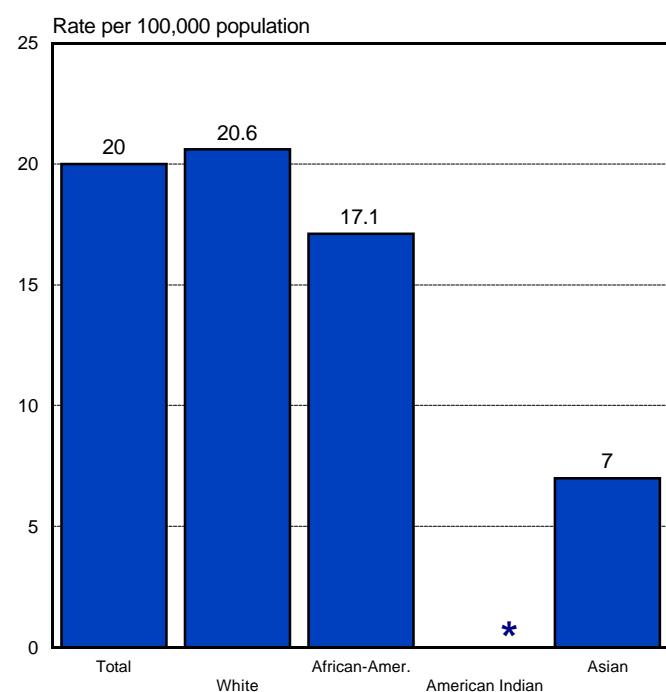

Age-Adjusted Death Rate for Chronic Obstructive Pulmonary Disease by Race and Sex, Maryland, Selected Years, 1986 to 1996.

Age-Adjusted Death Rate for Chronic Obstructive Pulmonary Disease, Maryland and the U.S., 1987-1996.

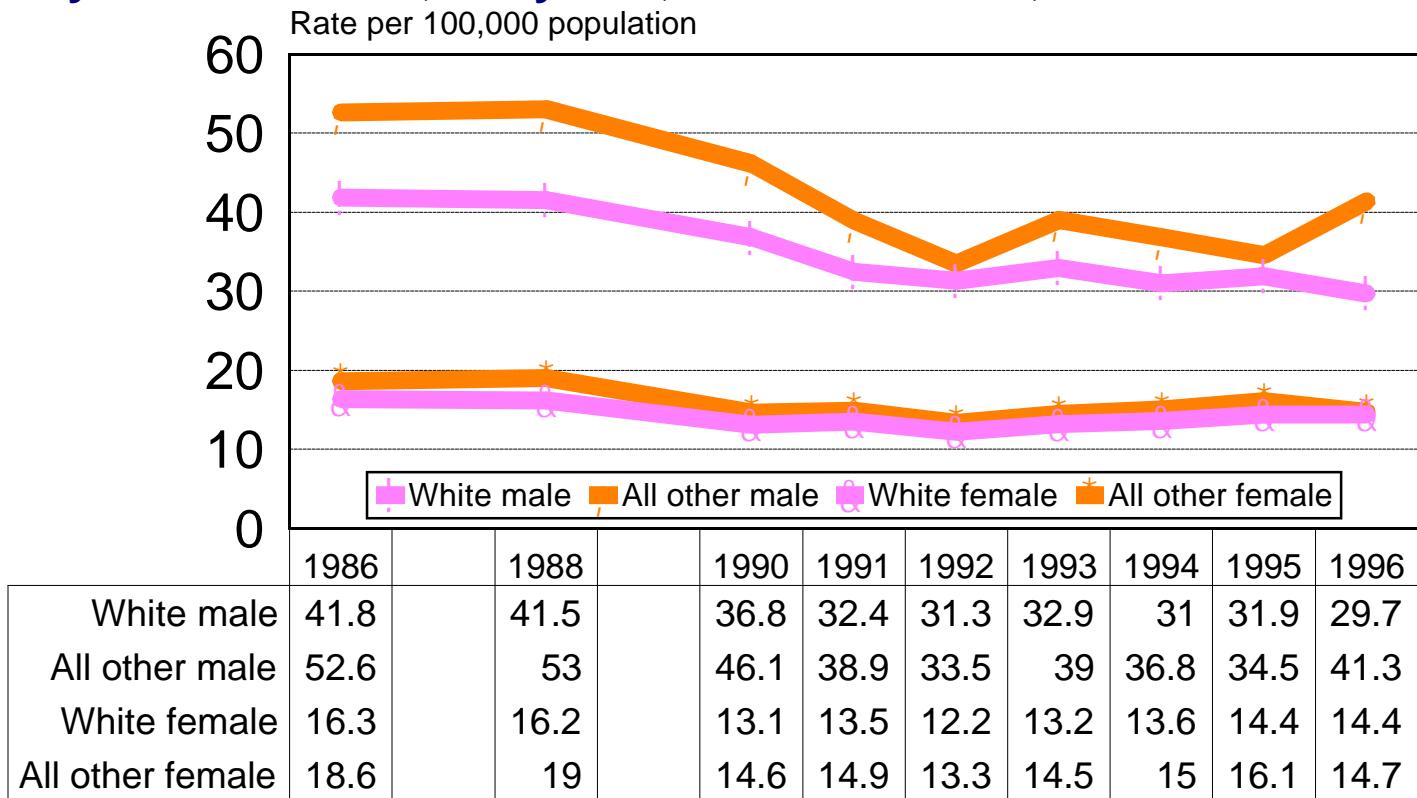

Age-Adjusted Death Rate for Chronic Obstructive Pulmonary Disease by Detailed Race, Maryland, 1996.

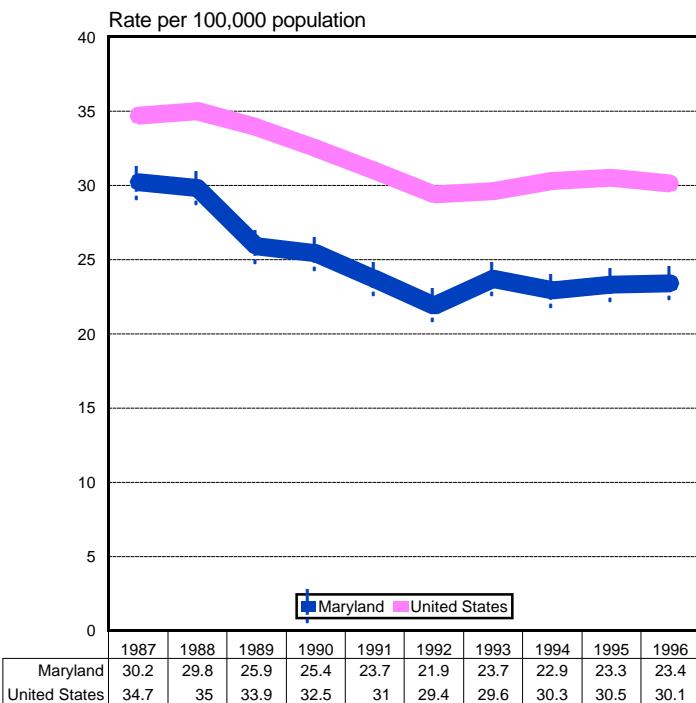

*Age-adjusted rates are not calculated when the number of deaths is less than 10.

ACCIDENTS AND ADVERSE EFFECTS

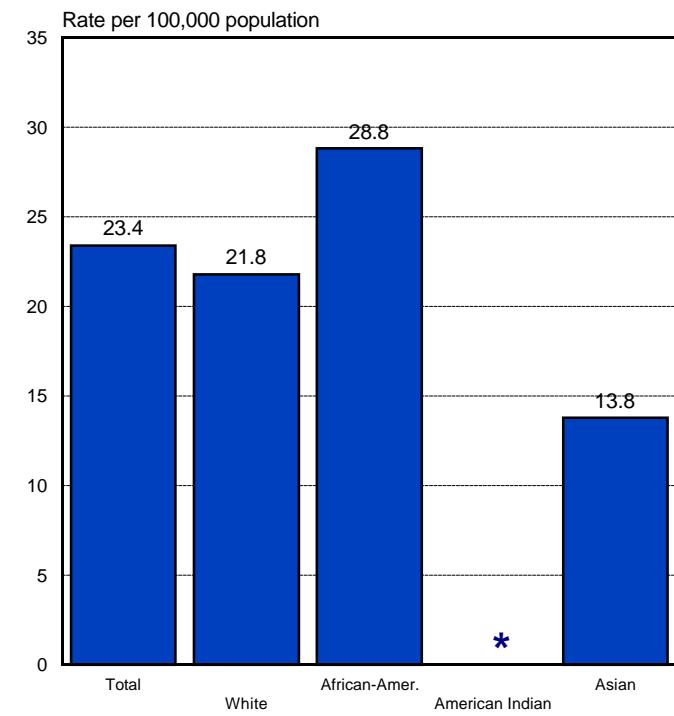

Age-Adjusted Death Rate for Accidents and Adverse Effects by Race and Sex, Maryland, Selected Years, 1986 to 1996.

Age-Adjusted Death Rate for Accidents and Adverse Effects, Maryland and the U.S., 1987-1996.

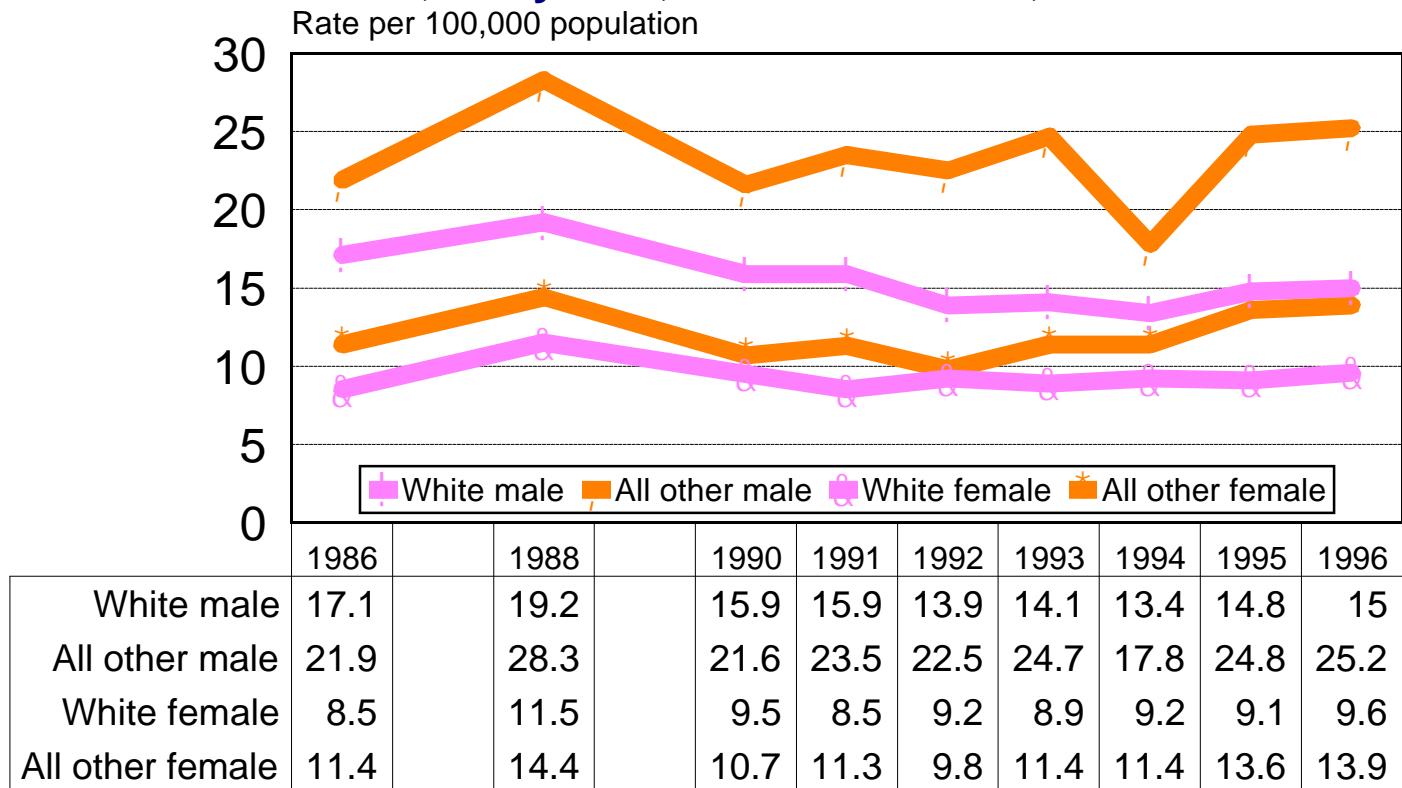

Age-Adjusted Death Rate for Accidents and Adverse Effects by Detailed Race, Maryland, 1996.

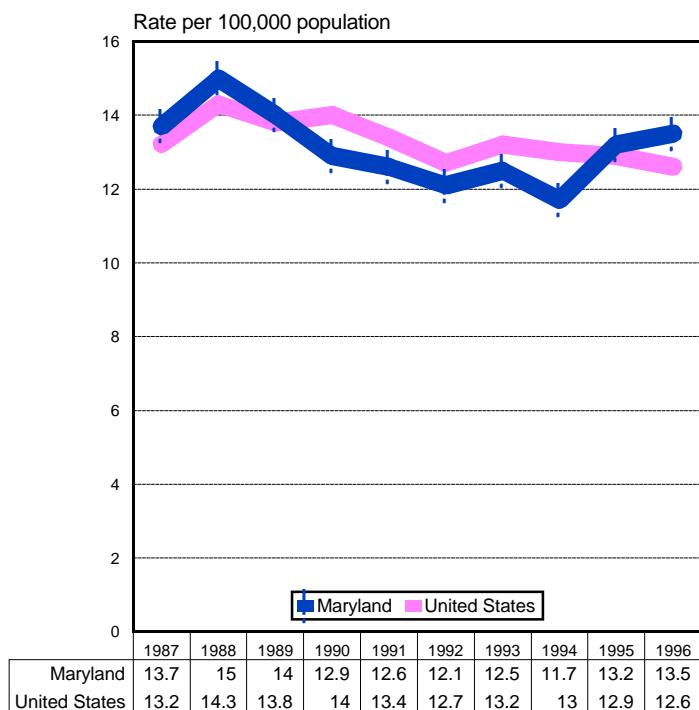

*Age-adjusted rates are not calculated when the number of deaths is less than 10.

PNEUMONIA AND INFLUENZA

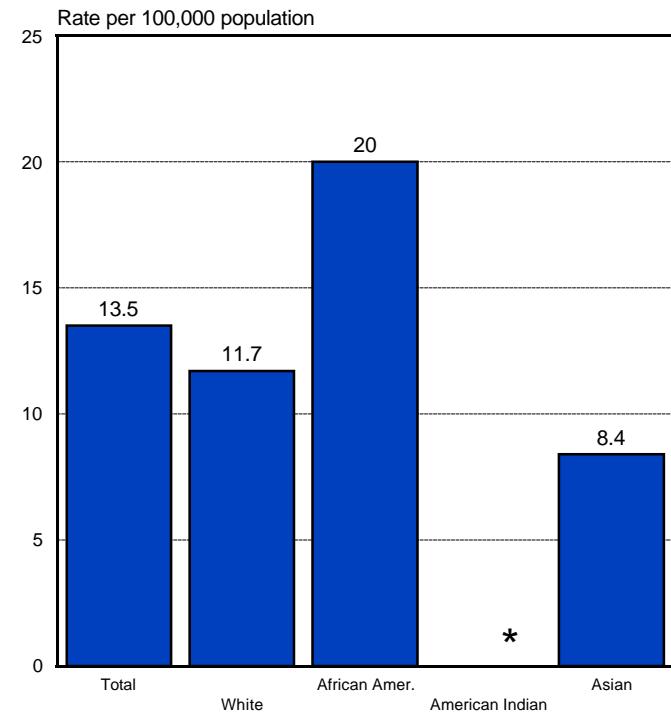

Age-Adjusted Death Rate for Pneumonia and Influenza by Race and Sex, Maryland, Selected Years, 1986 to 1996.

Age-Adjusted Death Rate for Pneumonia and Influenza, Maryland and the U.S., 1987-1996.

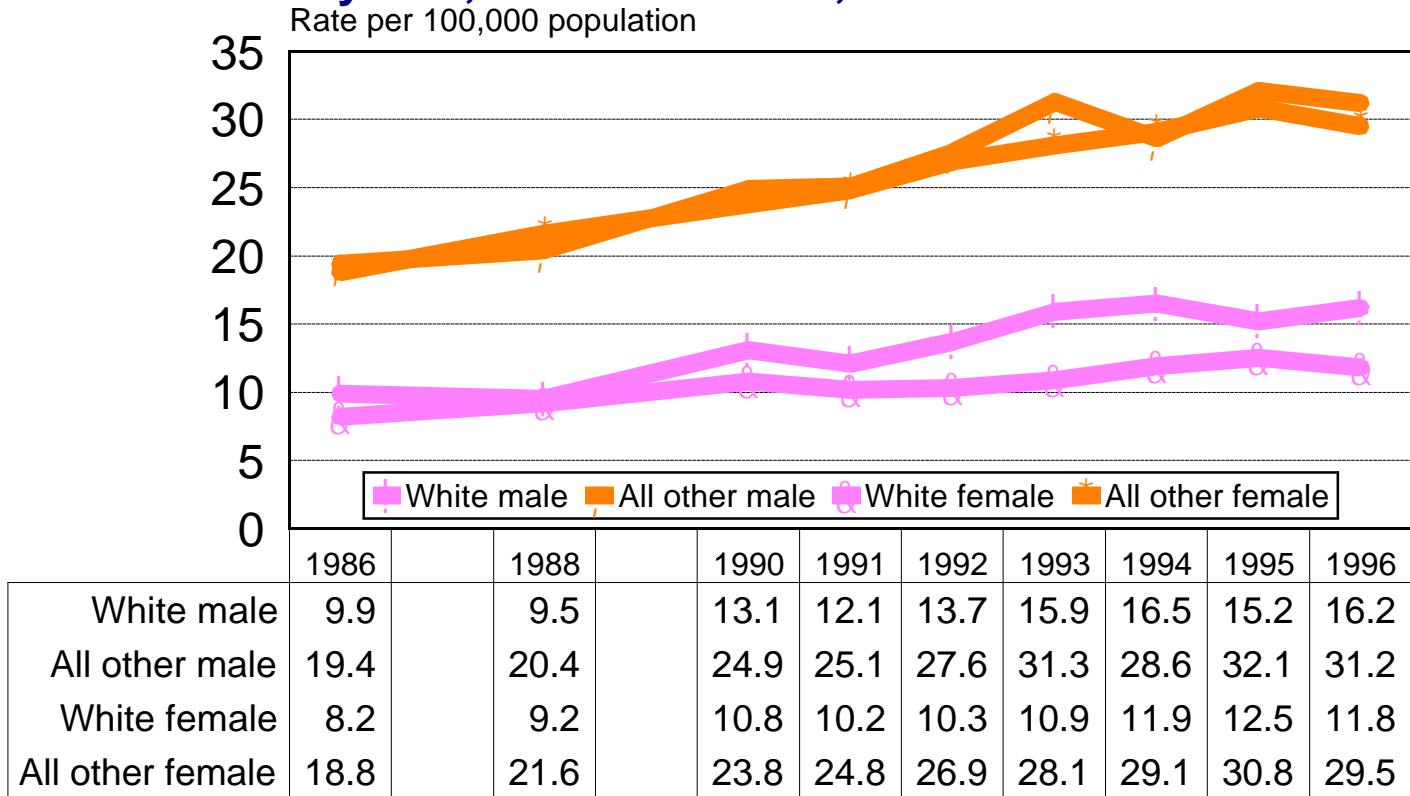

Age-Adjusted Death Rate for All Pneumonia and Influenza by Detailed Race, Maryland, 1996.

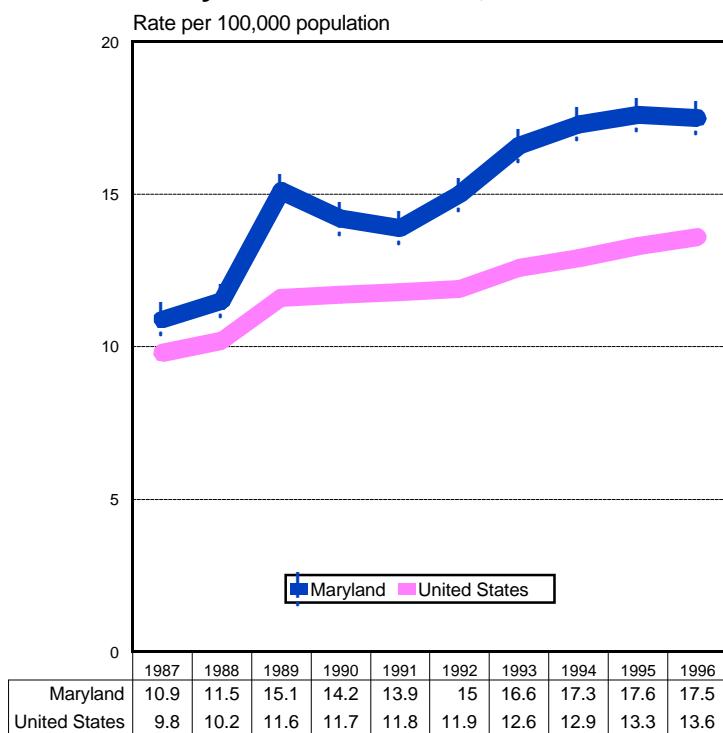

*Age-adjusted rates are not calculated when the number of deaths is less than 10.

DIABETES MELLITUS

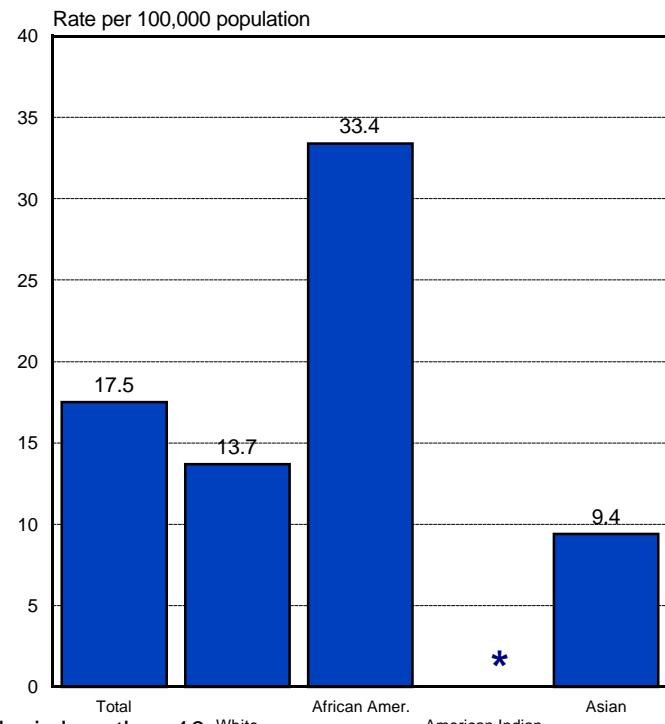

Age-Adjusted Death Rate for Diabetes by Race and Sex, Maryland, Selected Years, 1986 to 1996.

Age-Adjusted Death Rate for Diabetes, Maryland and the U.S., 1987-1996.

Age-Adjusted Death Rate for Diabetes by Detailed Race, Maryland, 1996.

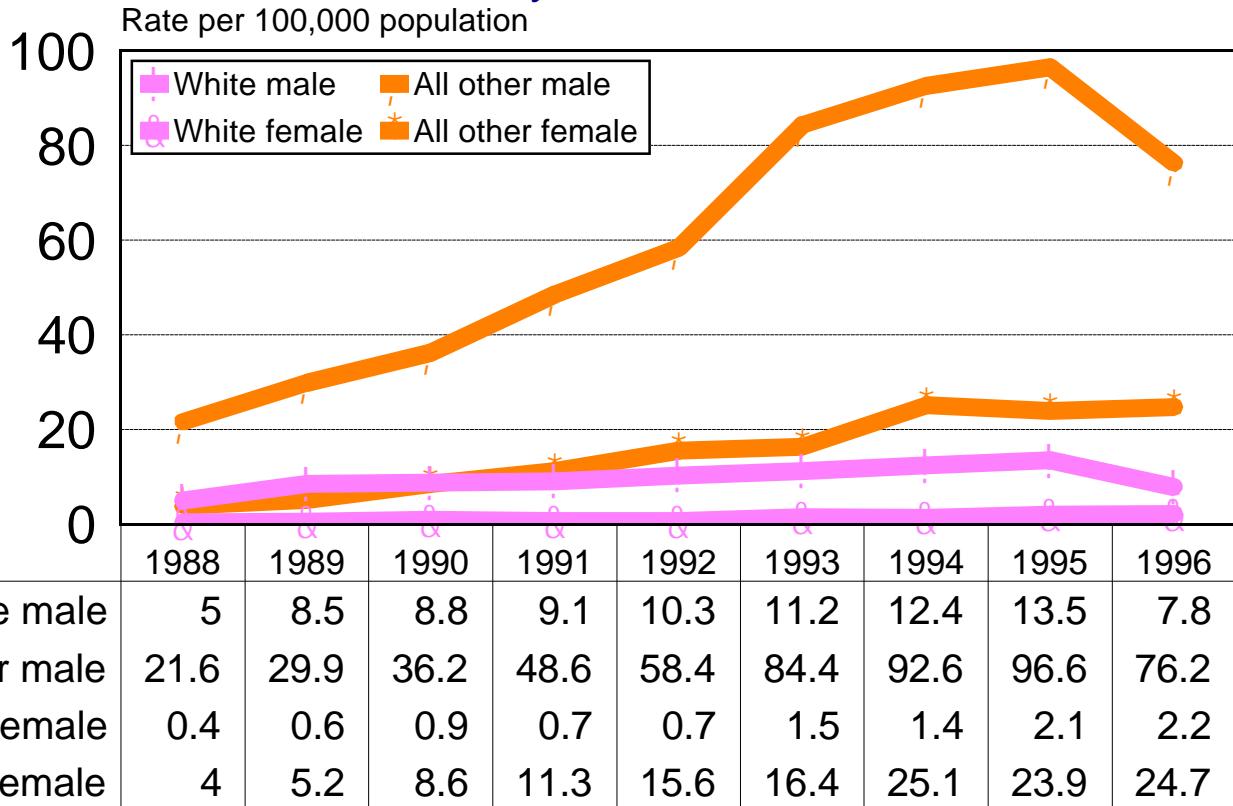

*Age-adjusted rates are not calculated when the number of deaths is less than 10.

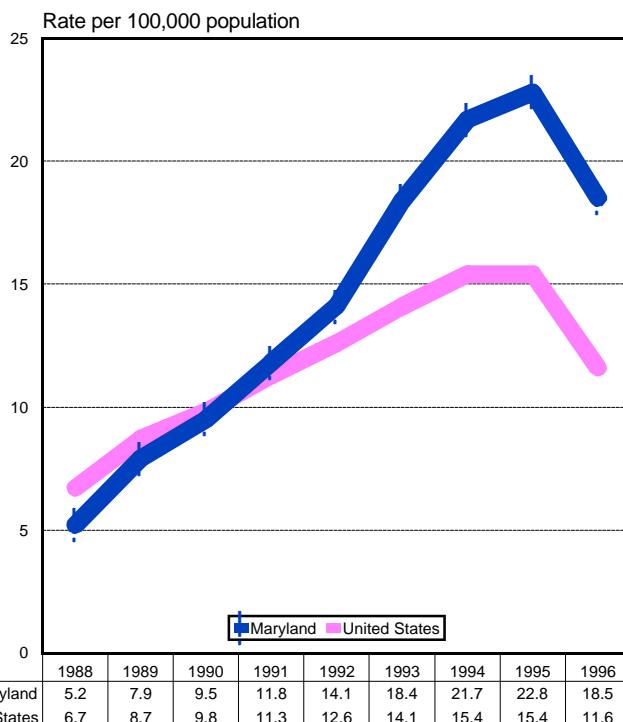

White

HUMAN IMMUNODEFICIENCY VIRUS

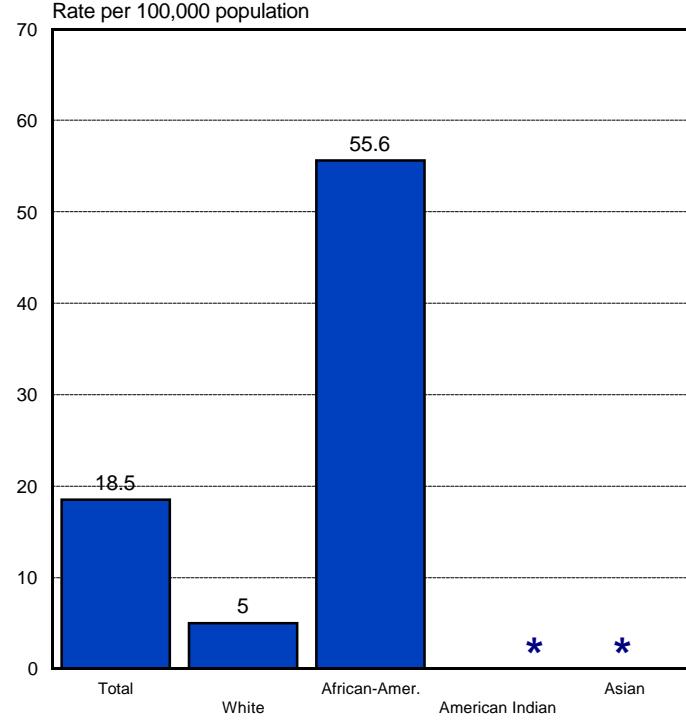

Age-Adjusted Death Rate for Human Immunodeficiency Virus by Race and Sex, Maryland, 1988 to 1996.

Age-Adjusted Death Rate for Human Immunodeficiency Virus, Maryland and the U.S., 1988-1996.

Age-Adjusted Death Rate for Human Immunodeficiency Virus by Detailed Race, Maryland, 1996.

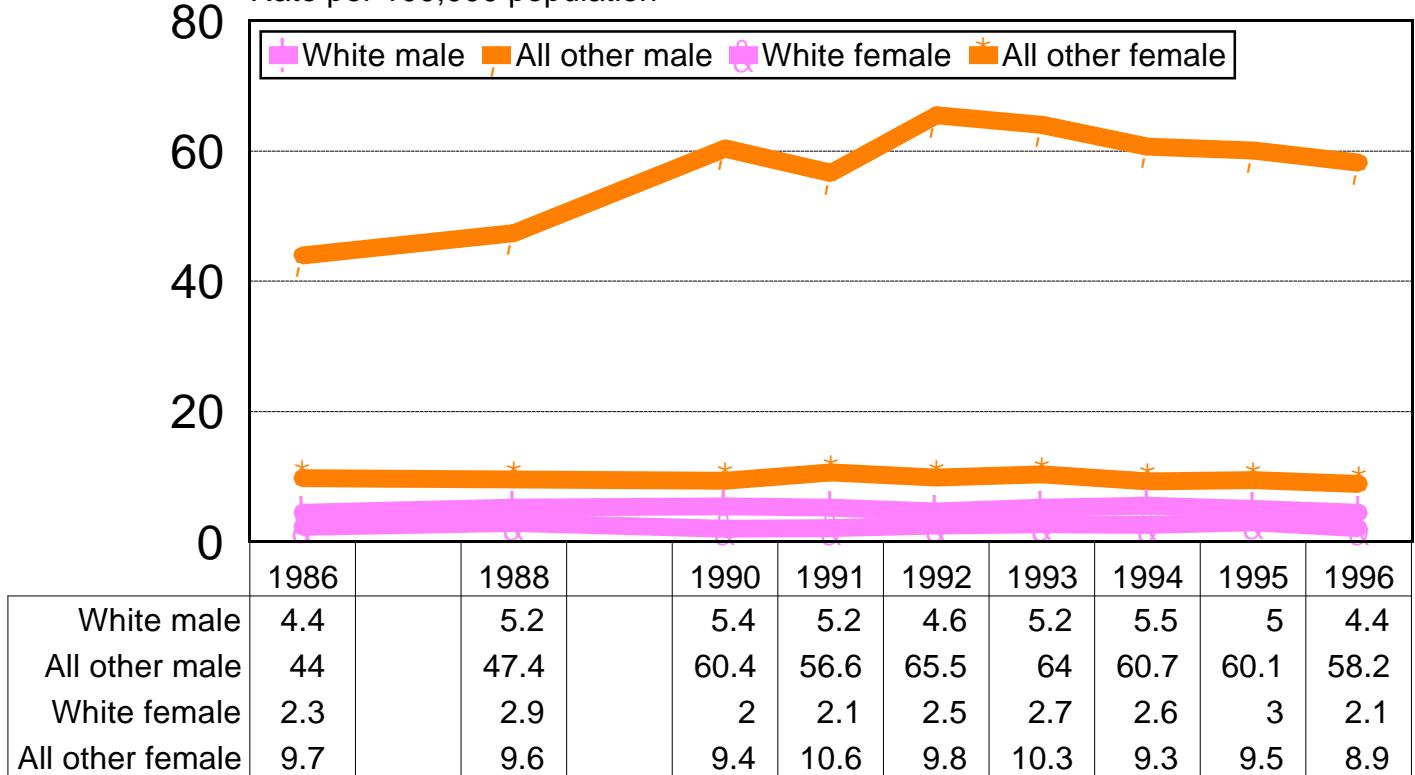

*Age-adjusted rates are not calculated when the number of deaths is less than 10.

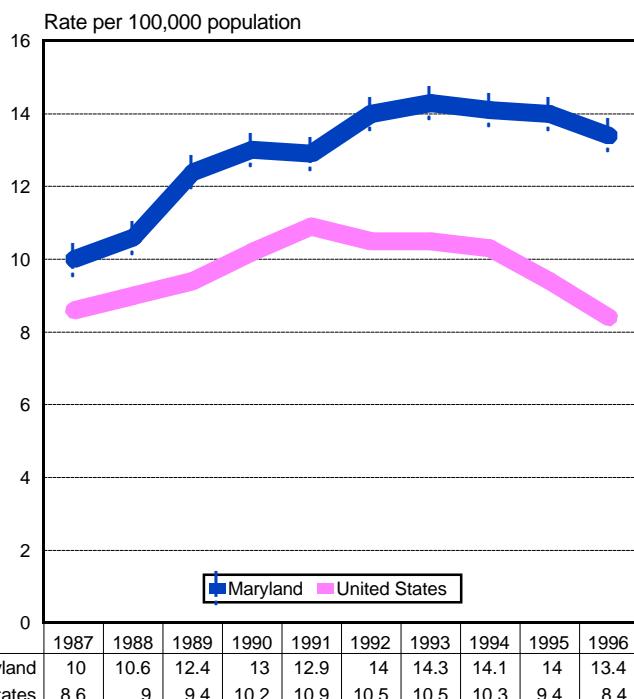

HOMICIDE

Age-Adjusted Death Rate for Homicide by Race and Sex, Maryland, Selected Years, 1986 to 1996.

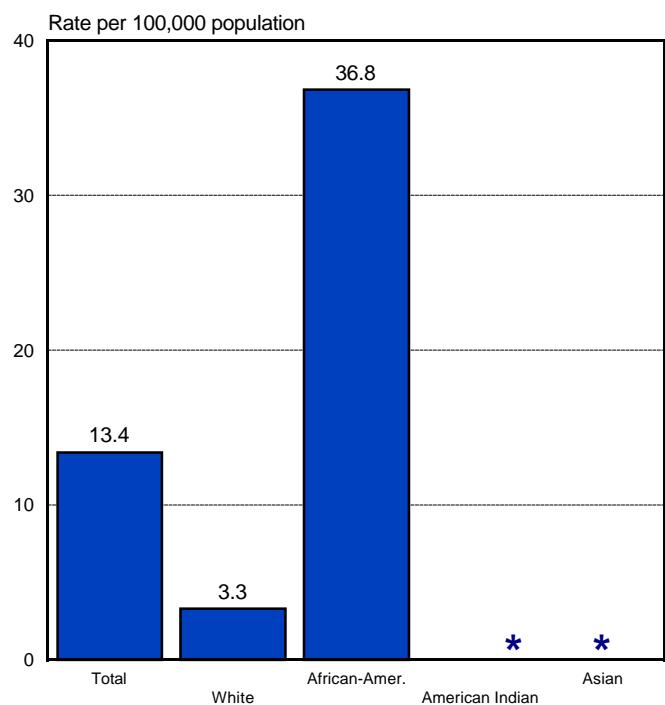

Rate per 100,000 population

Age-Adjusted Death Rate for Homicide, Maryland and the U.S., 1987-1996.

Age-Adjusted Death Rate for Homicide by Detailed Race, Maryland, 1996.

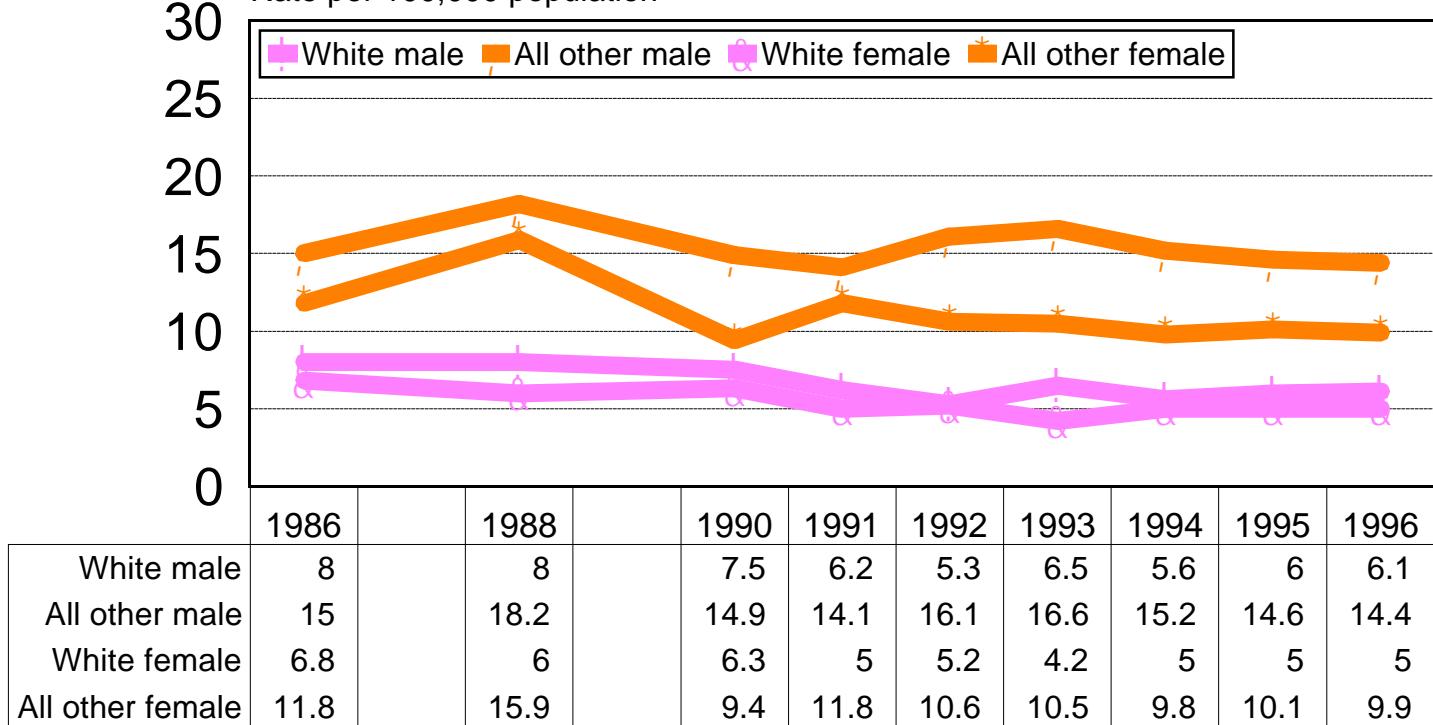

*Age-adjusted rates are not calculated when the number of deaths is less than 10.

SEPTICEMIA

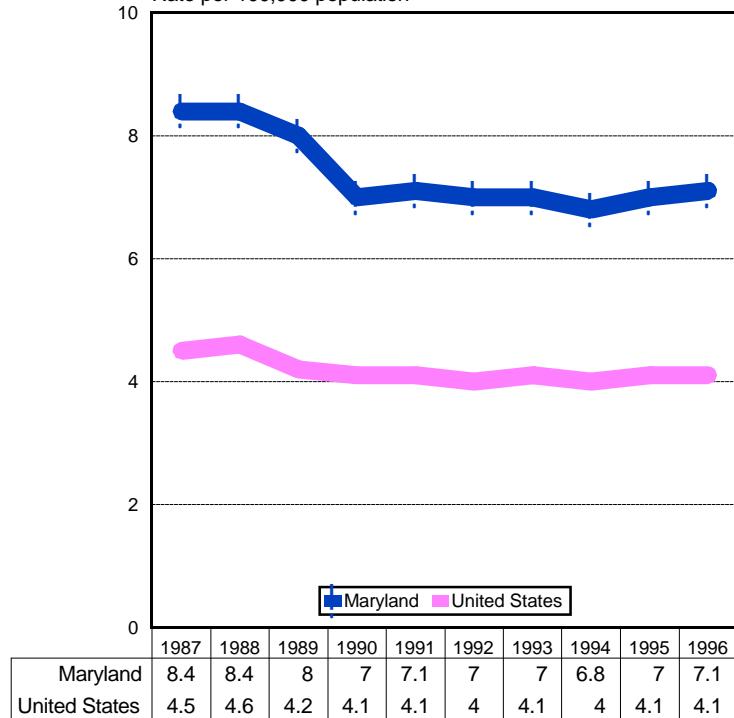

Age-Adjusted Death Rate for Septicemia by Race and Sex, Maryland, Selected Years, 1986 to 1996.

Rate per 100,000 population

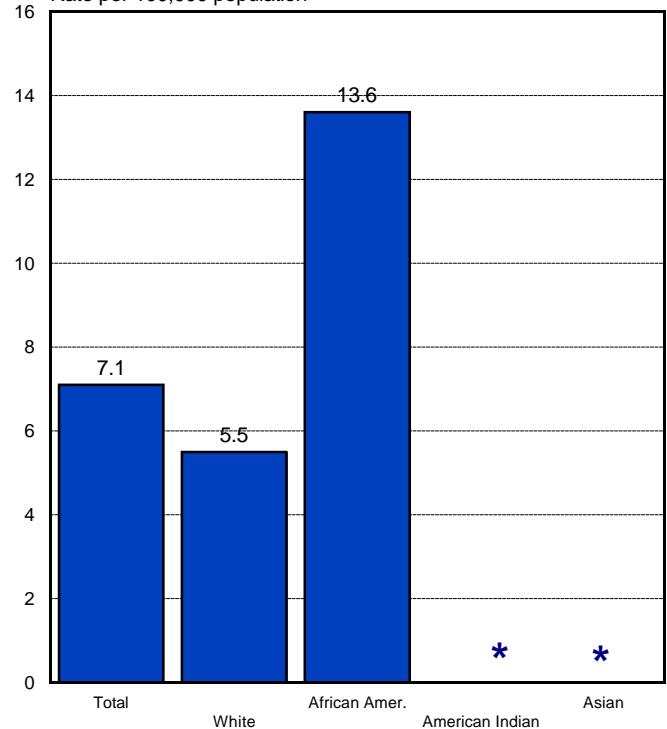

Age-Adjusted Death Rate for Septicemia, Maryland and the U.S., 1987-1996.

Rate per 100,000 population

Age-Adjusted Death Rate for Septicemia by Detailed Race, Maryland, 1996.

Rate per 100,000 population

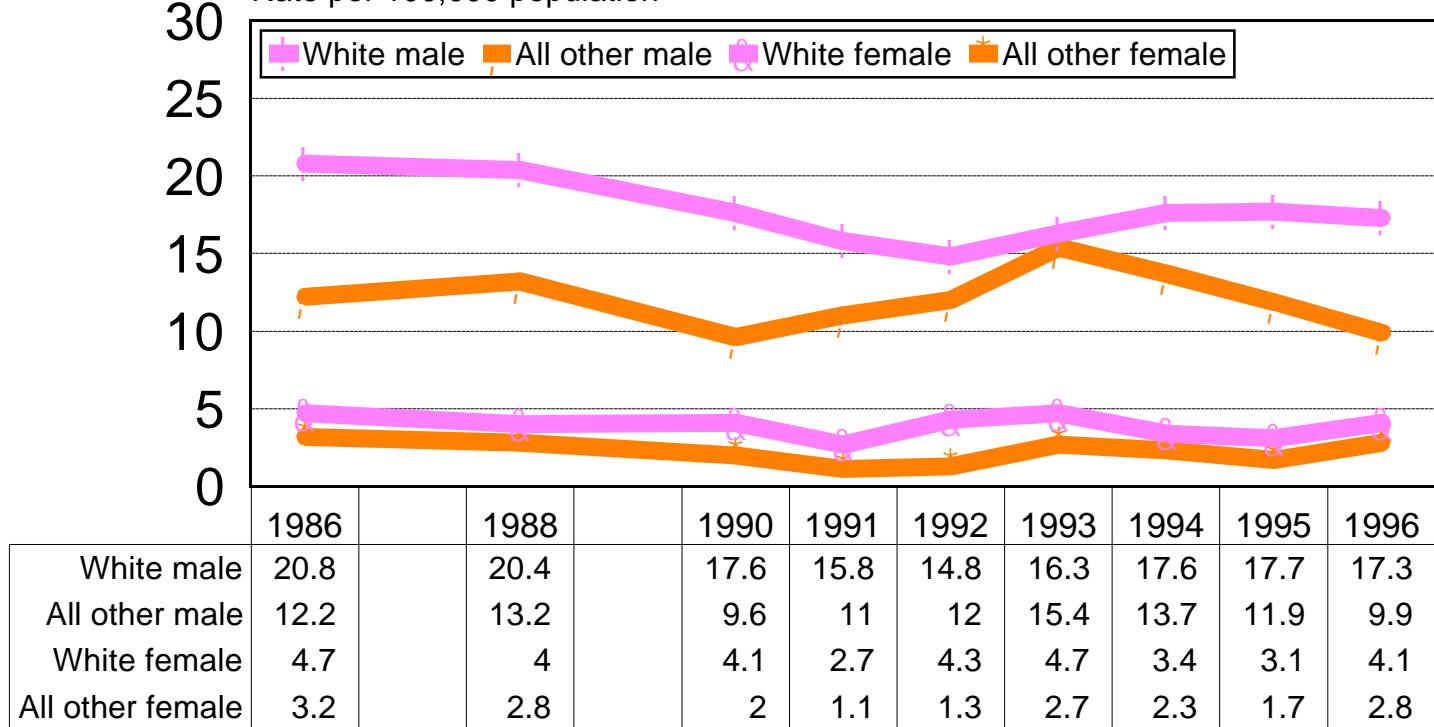

*Age-adjusted rates are not calculated when the number of deaths is less than 10.

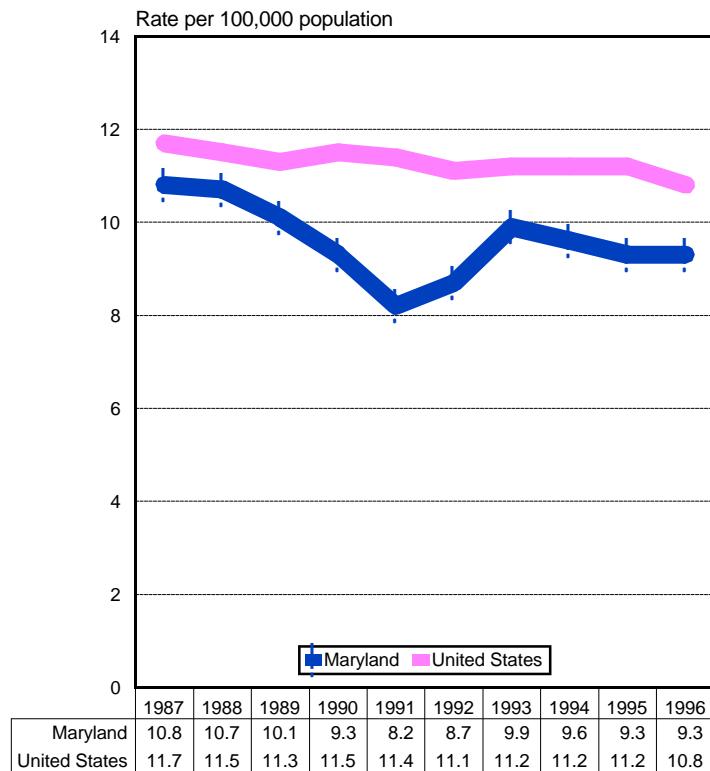

SUICIDE

Age-Adjusted Death Rate for Suicide by Race and Sex, Maryland, Selected Years, 1986 to 1996.

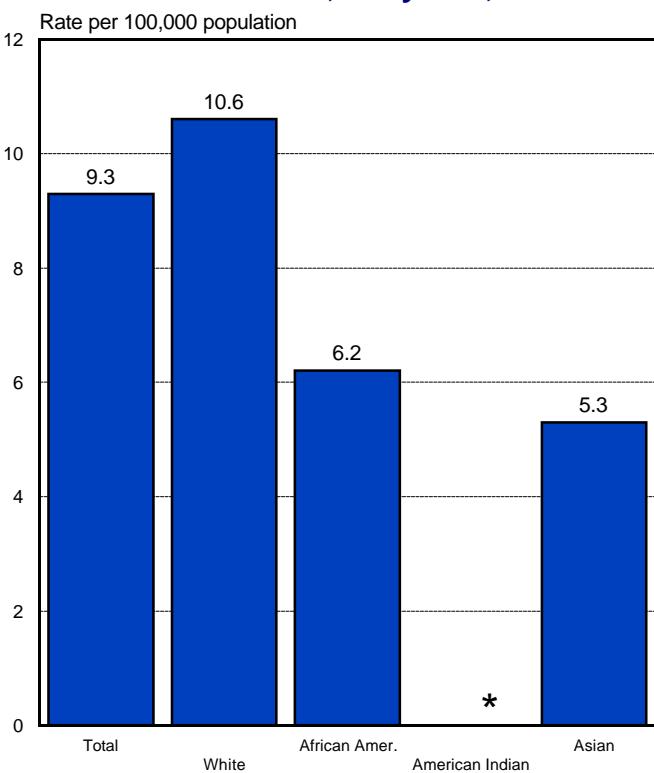

Rate per 100,000 population

Age-Adjusted Death Rate for Suicide, Maryland and the U.S., 1987-1996.

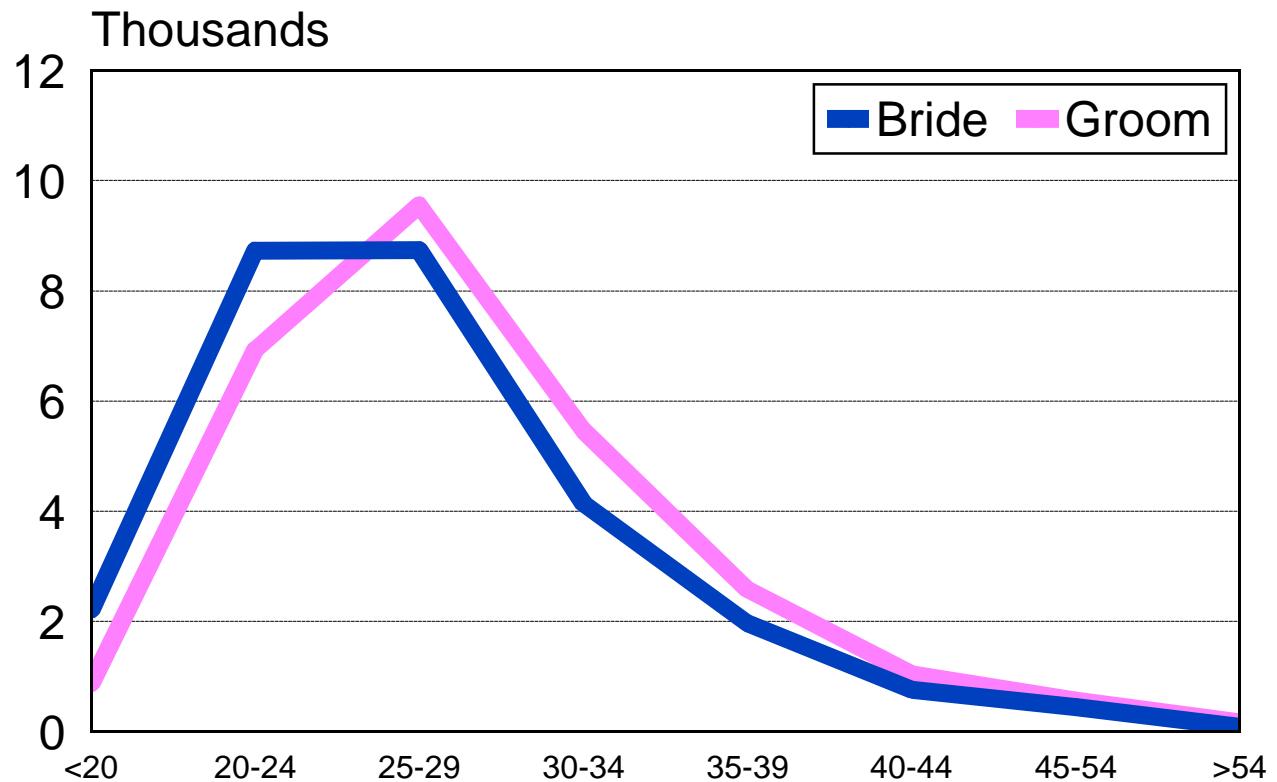

Age-Adjusted Death Rate for Suicide by Detailed Race, Maryland, 1996.

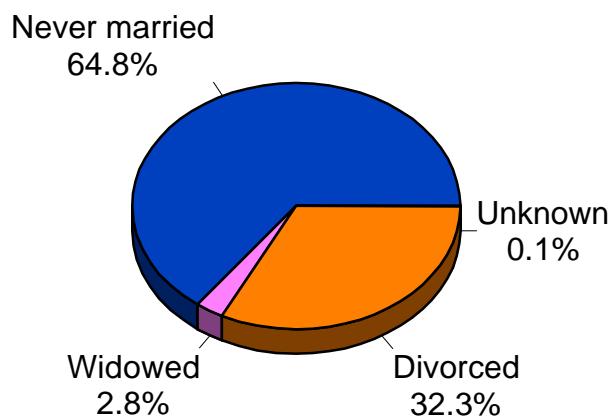

*Age-adjusted rates are not calculated when the number of deaths is less than 10.

MARRIAGES

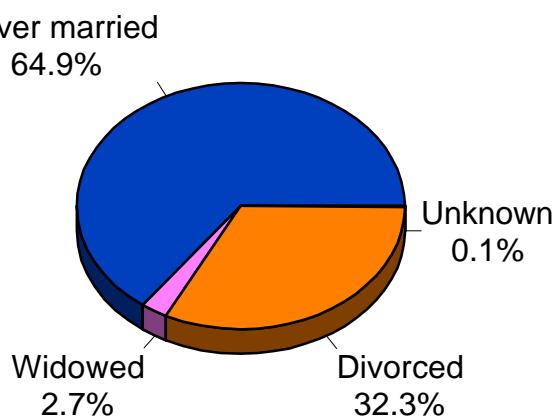

Number of First Marriages by Age of the Bride and Groom, Maryland, 1996.

Percent Distribution of Marriages by Previous Marital Status of the Bride and Groom, Maryland, 1996.

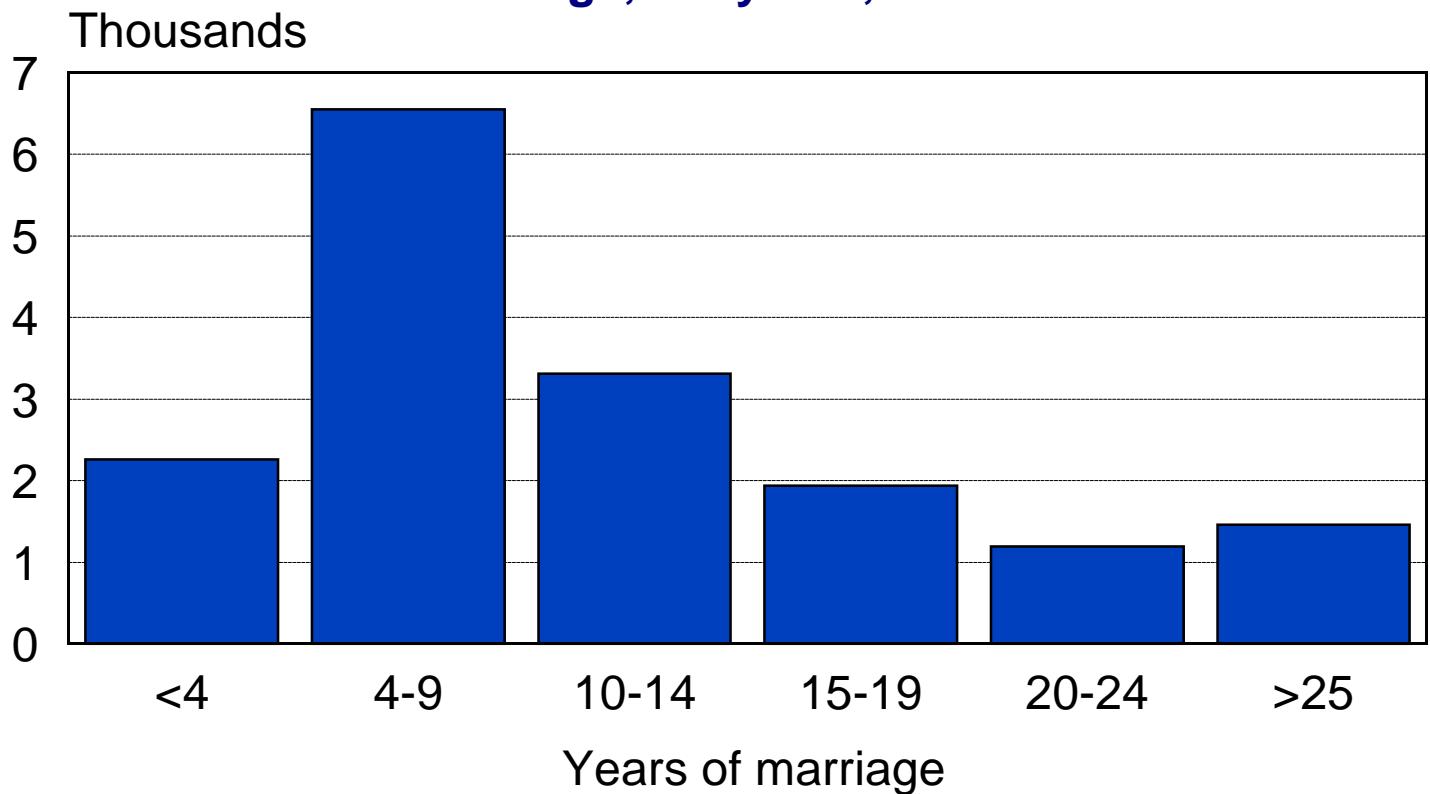

Bride

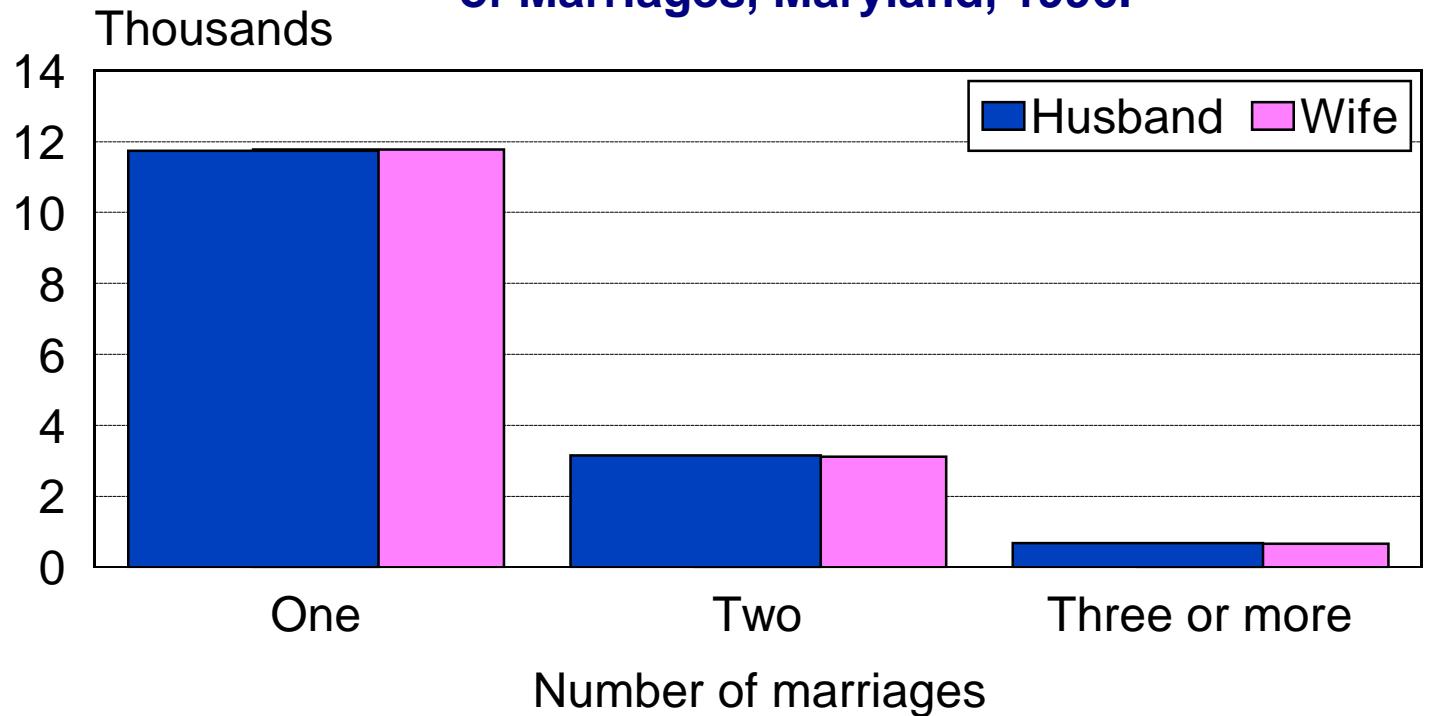

Groom

DIVORCES

Number of Divorces and Annulments by Duration of Marriage, Maryland, 1996.

Number of Divorces and Annulments by Total Number of Marriages, Maryland, 1996.

POPULATION

TABLE 1. ESTIMATED MARYLAND POPULATION BY RACE, REGION AND POLITICAL SUBDIVISION, JULY 1, 1996, WITH COMPARABLE 1990 CENSUS FIGURES.

Region and Political Subdivision	Estimated Population, July 1, 1996								Census (April 1, 1990)	
	All races	White		Total		All other races

TABLE 10. SELECTED NATALITY CHARACTERISTICS BY MATERNAL RACE, MARYLAND, 1996.

Characteristic	All races	White	<i>All other races</i>			
			Total	African American	American Indian	Asian
Number of births	71,473	43,740	27,733	22,783	164	2,459
Maternal characteristics						
Percentage of births to mothers <18 years of age	4.3	2.4	7.3	8.4	2.4	0.7
Percentage of births to mothers <20 years of age	10.3	6.7	16.0	18.3	8.5	1.7
Percentage of births to women with <12 years education*	13.0	9.4	18.8	19.6	14.5	6.7
Percentage of births to unmarried women	33.6	19.6	55.6	63.1	31.1	8.5
Percentage of 4th and higher order births	8.8	7.5	10.8	11.8	7.3	3.6
Percentage of births to women with prior liveborn loss	2.1	1.5	3.0	3.3	4.3	0.8
Pregnancy characteristics						
Percentage of births to women with prenatal care beginning in the first trimester*	88.3	92.8	79.9	78.5	91.4	89.7
Percentage of births to women with late or no prenatal care*	2.6	1.4	4.8	5.2	1.4	1.7
Percentage of plural births	3.1	3.2	3.0	3.1	3.7	2.0
Percentage of deliveries by cesarean section	21.7	21.2	22.5	23.1	23.2	20.3
Birth outcomes						
Percentage of low birth weight infants (<2500 grams)	8.6	6.3	12.2	13.4	7.3	6.5
Percentage of very low birth weight infants (<1500 grams)	1.9	1.1	3.2	3.6	1.8	1.0
Percentage of births with gestational age <37 weeks*	10.3	8.4	13.5	14.8	8.3	7.0
Percentage of births with 5 minute Apgar score <7	1.3	0.9	1.9	2.1	0.6	0.9
Infant mortality rate**	8.4	5.9	12.5	14.5	6.1	5.3
Neonatal mortality rate**	5.8	3.6	9.2	10.7	0.0	4.1
Postneonatal mortality rate**	2.6	2.2	3.3	3.8	6.1	1.2

*Percentages exclude births for which information pertaining to this variable is unknown.

**Per 1,000 live births.
